

BACTERIOLOGY QUESTIONS

1

What are the major differences between Gram-positive and Gram-negative bacteria?

ANSWER

The primary difference between Gram-positive and Gram-negative bacteria is the structure of their cell walls. Gram-positive bacteria have a thick peptidoglycan layer, while Gram-negative bacteria have a thin peptidoglycan layer and an additional outer membrane that affects the permeability of the cell wall to certain antibiotics and the pathogen's ability to cause disease.
