Boullart,1995 Paperback The 3rd IFAC IFIP Workshop on Algorithms and Architectures for Real Time Control is concerned with new architectural software and hardware aspects for real time control This the latest in the series investigates the state of the art and present new research and application results in software and hardware for real time control The workshop brings together leading

engineers and computer scientists who are researchers developers and practitioners both from the academic and industrial world to discuss recent developments Real Time Programming 1995 (WRTP '95) Phillip Laplante, Phillip A.

Laplante, Wolfgang A. Halang, 1996 These proceedings contain the papers presented at the 20th IFAC IFIP Annual Workshop on Real Time Programming WRTP 95 held in Florida USA on 6-10 November 1995 The unifying theme of the Workshop was the problem presented by the designed construction and maintenance of complex computer systems which are important in sectors such as manufacturing communications defence transportation aerospace hazardous environments energy and health care These systems frequently include distributed heterogeneous networks and are constrained by requirements on performance real time behaviour fault tolerance security adaptability development time and cost long life concerns and other areas The papers were grouped under various topics complex and dependable real time systems formal methods languages tools and environments systems and software engineering advanced applications such as imaging database systems and heterogeneous systems and reflect the desire to bring together industrial academic and government experts from various disciplines and to promote long term research near term effective complex systems requirements and promising tools

Human-oriented Design of Advanced Robotics Systems (DARS'95) Peter Kopacek, 1996 The first IFAC Workshop on Human Oriented Design of Advanced Robotics Systems DARS 95 was organized and held in Austria in 1995 because new approaches for advanced robotics systems are expected to be applied in industrial production and other areas in the near future and new ergonomic social and cultural aspects must be considered if employees are to work with these systems The workshop provided a forum for researchers to discuss and overview these aspects This postprint volume contains 33 of the 34 papers presented at the workshop and deals with system design especially of man machine interface for autonomous semi autonomous and tele operated mode and for tele existence system organizational and social aspects with respect to the environment in which the system is embedded system cultural aspects due to different living and working traditions and conditions of the people involved system economical aspects Fault-tolerant Control Systems Hassan Noura, Didier

Theilliol, Jean-Christophe Ponsart, Abbas Chamseddine, 2009-07-30 The series Advances in Industrial Control aims to report and encourage technology transfer in control engineering The rapid development of control technology has an impact on all areas of the control discipline New theory new controllers actuators sensors new industrial processes computer methods new applications new philosophies new challenges Much of this development work resides in industrial reports feasibility study papers and the reports of advanced collaborative projects The series offers an opportunity for researchers to present an extended exposition of such new work in all aspects of industrial control for wider and rapid dissemination Control system design and technology continues to develop in many different directions One theme that the Advances in Industrial Control series is following is the application of nonlinear control design methods and the series has some interesting new commissions in progress However another theme of interest is how to endow the industrial controller with the ability to

overcome faults and process degradation Fault detection and isolation is a broad field with a research literature spanning several decades This topic deals with three questions How is the presence of a fault detected What is the cause of the fault Where is it located However there has been less focus on the question of how to use the control system to accommodate and overcome the performance deterioration caused by the identified sensor or actuator fault
