Nonlinear Systems and Matrix Analysis - Recent Advances in Theory and Applications Peter Chen, Victor Martinez-Luaces, 2024-11-27 Nonlinear system analysis is of interest to engineers sociologists physicists mathematicians and many other scientists since most systems are inherently nonlinear in nature In mathematics a nonlinear system does not satisfy the superposition principle such as in a linear system Therefore the theories underlining nonlinear analysis and their applications need to be developed on their own merit The first section of this book is a collection of examples reporting recent advances in both theory and applications of nonlinear system analysis The contents of each chapter will provide in depth foresight to interested readers As numerical linearization to a set of matrix equations is still the principal method used to solve a nonlinear system matrix analysis is the topic of the second section of this book The matrices have invaded practically all areas of mathematics the experimental and social sciences engineering and technology This volume updates purely mathematical theoretical aspects and it also presents concrete examples of the wide range of applications of matrix theory in other disciplines

Autonomous Vehicle Andrzej Zak, 2016-09-07 Autonomous vehicles despite their relatively short history have already found practical application in many areas of human activity Such vehicles are usually replacing people in performing tasks that require long operating time and are held in inaccessible or hazardous environments

Nevertheless autonomous robotics is probably the area that is being developed the most because of the great demand for such devices in different areas of our lives This book is a collection of experiences shared by scientists from different parts of the world doing researches and daily exploiting autonomous systems Giving this book in the hands of the reader we hope that it will be a treasure trove of knowledge and inspiration for further research in the field of autonomous vehicles
