Microprocessor And Microcontroller Lab Manual Word Document:

Getting Started with Tiva ARM Cortex M4 Microcontrollers Dhananjay V. Gadre, Sarthak Gupta, 2017-10-16 The book presents laboratory experiments concerning ARM microcontrollers and discusses the architecture of the Tiva Cortex M4 ARM microcontrollers from Texas Instruments describing various ways of programming them. Given the meager peripherals and sensors available on the kit the authors describe the design of Padma a circuit board with a large set of peripherals and sensors that connects to the Tiva Launchpad and exploits the Tiva microcontroller family's on chip features ARM microcontrollers which are classified as 32 bit devices are currently the most popular of all microcontrollers. They cover a wide range of applications that extend from traditional 8 bit devices to 32 bit devices. Of the various ARM subfamilies Cortex M4 is a middle level microcontroller that lends itself well to data acquisition and control as well as digital signal manipulation applications. Given the prominence of ARM microcontrollers it is important that they should be incorporated in academic curriculums. However there is a lack of up to date teaching material textbooks and comprehensive laboratory manuals. In this book each of the microcontroller's resources digital input and output timers and counters serial communication channels analog to digital conversion interrupt structure and power management features are addressed in a set of more than 70 experiments to help teach a full semester course on these microcontrollers. Beyond these physical interfacing exercises it describes an inexpensive BoB break out board that allows students to learn how to design and build standalone projects as well as a number of illustrative projects. This laboratory manual intended to support the undergraduate and postgraduate students in the related fields of Electronics for practicing embedded system experiments. The chapters begin with an introduction and it covers the experiments for the 8085 Microprocessor 8051 Microcontroller laboratory. Each experiment consists of aim hardware software requirements algorithm program experimental results and conclusion. For the most part the lab manual includes the standard laboratory experiments that have been used by many academicians related to electronics departments for years. Over sixty three practical experiments described here to explore the practical knowledge of students on embedded systems. This book comprises two chapters that are focused on the lab experiments of the 8085 Microprocessor 8051 Microcontroller laboratory. This book helps to Promote experiential learning among the students. Give practical or informal knowledge to understand how things work. Know the interaction between software and hardware.
