The Human-Centered Classroom KHRITISH SWARGIARY, 2025-11-14 Education is standing at the edge of the greatest transformation in human history For centuries schools were designed like factories students entered as raw material were processed through standardized curricula and were expected to emerge as identical products ready for the workforce That

model once served a world driven by industrial labor limited information and predictable career paths But today we live in an age of artificial intelligence global connectivity cultural diversity emotional crises and unprecedented technological acceleration The old system is no longer just outdated it is dangerously inadequate This book was born from a simple but urgent question What should education look like in a world where machines can think information is infinite and human beings are searching for meaning As an educator researcher and lifelong learner I have spent years working at the intersection of inclusive education educational technology and policy driven reform Through my engagement with students teachers parents researchers and institutions one reality has become painfully clear while technology is advancing rapidly our education systems are failing to keep pace with the human needs of learners Children are more connected than ever before yet emotionally more isolated Knowledge is everywhere yet understanding is rare Tools are powerful yet compassion and creativity are often neglected This book does not argue that technology is the problem On the contrary it recognizes artificial intelligence digital learning platforms and data driven education as some of the most powerful allies humanity has ever created What we must question however is how these tools are used and whether they are designed to serve human growth or simply economic efficiency When technology is introduced without empathy it deepens inequality When used without ethics it weakens trust But when aligned with human values it becomes a force for extraordinary transformation At the heart of this book lies a conviction The future of education must be human centered emotionally intelligent and radically inclusive Every child whether gifted or struggling disabled or neurodivergent wealthy or underprivileged deserves an education that recognizes their dignity potential and individuality For far too long education systems across the world have defined success by narrow standards of academic performance while ignoring emotional wellbeing creativity adaptability and purpose The result is a generation of students who may be skilled yet uncertain knowledgeable yet disconnected from themselves and the world This book calls for a new educational philosophy one that integrates artificial intelligence with emotional intelligence digital tools with ethical responsibility and innovation with inclusion It presents a vision of classrooms where technology does not replace teachers but empowers them where data supports learning but does not erase human judgment and where every learner regardless of ability or background is seen heard and supported I have written this book not merely as an academic contribution but as a deeply personal and professional commitment to the future of education It is meant for teachers seeking meaning beyond exams policymakers looking for sustainable reform researchers pursuing impact and students who deserve a learning experience that prepares them not only for jobs but for life The world our children will inherit will be complex uncertain and technologically advanced But it must also be compassionate fair and deeply human Education is the bridge between those two realities If we build that bridge wisely we can ensure that artificial intelligence enhances human potential rather than diminishing it and that progress never comes at the cost of dignity This book invites you to imagine design and lead that future

Khritish Swargiary Author AKA KS Luminar The Age of Extraction Tim

Wu,2025-11-13 Today's dominant tech platforms manipulate attention, extract wealth, and deepen inequality. We must take back control if we are to create a balanced economy that works for everyone. A must read: FINANCIAL TIMES Insightful CORY DOCTOROW author of *Enshittification*. Essential reading: KAREN HAO author of *Age of Empire*. Our world is ruled by a handful of tech platforms. They provide great conveniences and entertainment but also stand as some of the most effective instruments of wealth extraction ever invented, seizing immense amounts of money, data, and attention from all of us. An economy driven by tech and AI could enrich us yet it could also marginalize entire industries, widen the wealth gap, and foster a two-class nation. As technology evolves and our markets adapt, can society cultivate a better way? Is it possible to balance economic growth and egalitarianism, or are we too late? Tim Wu, the preeminent scholar and former White House official who coined the phrase net neutrality, tells the story of an internet that promised widespread wealth and democracy only to aid the spread of autocracy instead. From generative AI and predictive social data to antitrust and cryptocurrency, Wu frames our current moment within key lessons from recent history. And perhaps most importantly of all, Wu envisions a future where technological advances serve the greatest possible good for everyone. Concise and hopeful, *The Age of Extraction* offers consequential proposals for reclaiming control to achieve better economic balance and prosperity for all. A passionate call for a fairer economy. DARON ACEMOGLU co-author of *Why Nations Fail*. A how-to book on how we can achieve liberty.
