Navigating the Data Minefields Scott M. Shemwell, 2025-06-13 Volumes have been written on the need for high quality data to support organizational decision making. Most of those books appear to focus on the development and sustainment of data from the standpoint of those directly responsible for the management of data stores and the use of technology necessary to acquire, store and secure data sets. *Navigating the Data Minefields: Management's Guide to Better Decision Making* provides executives and subject matter experts SMEs with a reasonable set of useful tools they can adapt to their specific organization and operating environment. While complexity can never be taken out of an integrated system, decision making can be facilitated by using metrics that take into consideration the quality of the data used to make decisions, i.e. risk mitigation. Professionals who depend on large high quality data sets such as senior and mid level management, engineering SMEs, data scientists, IT systems engineers and medical professionals will want to have this book in their decision making arsenal.

Build a Text-to-Image Generator (from Scratch) Mark Liu, 2026-01-13 This book takes you step by step through creating your own AI models that can generate images from text. You'll explore two methods of image generation: vision transformers and diffusion models, and learn vital AI development techniques as you go. Dive into the powerful models behind AI image generators. The best way to learn is to build something from scratch, and in this book you'll build your very own diffusion model and vision transformer. As you work through each stage of development, you'll develop an understanding of how these models can be customized, applied, and integrated for impressive multimodal AI. *Build a Text to Image Generator from Scratch* teaches you how to build and train models to generate high resolution images based on text descriptions. Edit an existing image based on text prompts. Build and train a model to add captions to images. Build and train a vision transformer to classify images. Fine tune LLMs for downstream tasks such as classification, text or image generation. Better differentiate real images from deepfakes. About the technology: AI generated images appear everywhere, from high end advertising to casual social media feeds. Text to image tools like Dall-e, Midjourney, and Flux make it easy to create AI art, but how do they work? In this book, you'll find out by building your own text to image generator. About the book: *Build a Text to Image Generator from Scratch* explores both transformer based image generation and diffusion models. You'll work hands on to build a pair of simple generation models that can classify images, automatically add captions, reconstruct images, and enhance existing graphics. Author Mark Liu guides you every step of the way with clear explanations, informative diagrams, and eye opening examples you can build on your own laptop. What's inside: *Build a vision transformer to classify images*, *Edit images using text prompts*, *Fine tune image models*. About the reader: Requires basic knowledge of generative AI models and intermediate Python skills. About the author: Mark Liu is the founding director of the Master of Science in Finance program at the University of Kentucky. He is also the author of *Learn Generative AI with PyTorch*.
