Ludicrous Edward Niedermeyer, 2019-08-20 Tesla is the most exciting car company in a generation but can it live up to the hype? Tesla Motors and CEO Elon Musk have become household names shaking up the staid auto industry by creating a set of innovative electric vehicles that have wowed the marketplace and defied conventional wisdom. The company's market valuation now rivals that of long established automakers and to many industry observers Tesla is defining the future of the industry. But behind the hype Tesla has some serious deficiencies that raise questions about its sky high valuation and even its ultimate survival. Tesla's commitment to innovation has led it to reject the careful zero defects approach of other car manufacturers even as it struggles to mass produce cars reliably and with minimal defects. While most car manufacturers struggle with the razor thin margins of mid priced sedans Tesla's strategy requires that the Model 3 finally bring it to profitability even as the high priced Roadster and Model S both lost money. And Tesla's approach of continually focusing on the future even as commitments and deadlines are repeatedly missed may ultimately test the patience of all but its most devoted fans. In Ludicrous journalist and auto industry analyst Edward Niedermeyer lays bare the disconnect between the popular perception of Tesla and the day to day realities of the company and the cars it produces. Blending original reporting and never before published insider accounts with savvy industry analysis Niedermeyer tells the story of Tesla as it's never been told before with clear eyes objectivity and insight. **Tesla's Market Entry Strategy in Germany. Foreign Market Entry and Cross-Cultural Business** Simon Glandien, 2020-11-18 Academic Paper from the year 2020 in the subject Business economics Business Management Corporate Governance grade A course Cross Cultural Business language English abstract The purpose of this paper is to analyze and evaluate the market entry of Tesla Inc in Germany. In November 2019 Tesla revealed to build a European production plant on the outskirts of Berlin in Germany. The aim of this paper is to give account to the foreign market entry of Tesla Inc in Germany. This leads to the following research question that guides this paper: What could be business success factors and threats of Tesla's strategy to enter the German automotive industry market? Tesla Inc former Tesla Motors Inc is a car manufacturer and sells fully electric vehicles energy storage systems as well as installs operates and maintains solar and energy storage products. Reuters n d The company was founded in 2003 by a group of engineers. In 2008 Tesla launched their first electric vehicle to the market. Tesla n d Tesla s

mission is to accelerate the world's transition to sustainable energy so the car manufacturer. So far, most of the Tesla vehicles are produced and assembled in the United States at its main Tesla Factory in Fremont, California. To that, Tesla operates other multiple production and assembly plants named Gigafactory such as in Fremont, California, Giga Nevada and in Buffalo, New York, Giga New York. Recently, in 2019, Tesla opened its first Gigafactory outside the American region in Shanghai, China, Giga Shanghai. A strategic step to internationalize the company and to enter the Chinese market. This strategic action can be explained by the fact that China is the largest car market in the world and the government is speeding up the expansion of electric mobility. Furthermore, manufacturing in Shanghai saves Tesla from having to transport its vehicles overseas and avoids import duties incurred in China for cars from the United States. However, the company is not just expanding its manufacturing into China.

### **An Electric Vehicle Conversion Start-Up. Development of a Business Model Approach**

Fabian Hoeft, 2019-10-24. Master's Thesis from the year 2019 in the subject Business economics, Business Management, Corporate Governance, grade 1.3. Niederrhein University of Applied Sciences, Krefeld School of Business and Economics, language English, abstract. Today's world of mobility is characterised by a high degree of dynamism and change is becoming apparent. Currently, around 45 million passenger cars with conventional combustion engines powered by diesel or petrol are registered in Germany. The share of electric vehicles is still well below one per cent. Nevertheless, the voices for sustainable and environmentally friendly transport are becoming louder. One political measure in this respect is the implementation of driving bans in major German cities for some conventional combustion cars. Car electrification is a solution for converting cars with conventional combustion engines to electric drives. In the context of this thesis, car electrification is regarded as a transition solution towards a nationwide electrified transport network of new electric cars. A comprehensive concept of a business model approach from a start-up perspective has been developed based on the analysis of the environment, industry and customer needs. Analysing the structure of the electrical conversion industry revealed that the subject of car electrification is hardly widespread and that current suppliers have only converted a smaller number of cars. Besides the small scale of implementation, the operational execution by existing suppliers can be considered weak in terms of competitiveness and sustainability. The analysis of the needs of potential customers of car electrification using qualitative and quantitative methods has led to incredibly valuable insights for the development of the business model approach. A high openness to purchase was expressed, considering some of the factors mentioned such as a test drive with an electrified car before purchase and a durability guarantee of the conversion. The high relevance of initial acquisition costs compared to operating expenses in the purchase decision for passenger cars is another precious insight. The business model approach developed based on the findings obtained differs fundamentally from the strategies of today's providers. By incorporating the existing infrastructure of workshops and service points, proximity to the end customer and scalability of the business operation can be achieved. Partnering with universities and industry are two critical elements in the development of a
