Use Spring AI to add generative AI features like virtual assistants text summaries and suggestions to your Java applications No matter what kind of software you re building there s a huge demand for AI features Until recently though Java developers have had few good tools for adding AI features to existing and new applications Spring AI an exciting new extension for Spring and Spring Boot changes the equation Spring AI provides generative AI capabilities natively within the framework so you can stick with Java end to end Spring AI in Action shows you how In Spring AI in Action you will Learn Spring AI from the ground up Create text summaries virtual assistants and more in Spring Boot applications RAG and other techniques to improve LLM responses Text from images and images from text Spring AI makes it much much easier to add generative AI features to Spring applications With this powerful framework extension you can write familiar Java code to build AI features like virtual assistants text summaries and smart search suggestions About the technology When it comes to AI applications no Python no problem The Spring AI framework makes it possible to add LLM based features to any Spring application using Java or other JVM languages like Kotlin From setting up Retrieval Augmented Generation RAG to creating AI agents Spring AI is fast powerful and instantly familiar About the book In Spring AI in Action bestselling author Craig Walls shows you how to build AI applications natively using Spring AI and Spring Boot You ll start with a simple Hello AI World example and quickly advance to more sophisticated techniques including RAG AI agents tool use speech and AI observability You ll see Craig s practical example driven approach with a relentless emphasis on getting stuff done What s inside Learn Spring AI from the ground up Create text summaries virtual assistants and more RAG agents and multimodal AI Chat and conversational memory AI tool use About the reader For Spring developers No Generative AI skills required About the author Craig Walls is a principal engineer a member of the Spring engineering team and a frequent conference speaker He is the author of Spring in Action the bestselling book ever published on Spring Framework Table of Contents 1 Getting started with Spring AI 2 Evaluating generated responses 3 Submitting prompts for generation 4 Talking with your documents 5 Enabling conversational memory 6 Activating tool driven generation 7 Applying Model Context Protocol 8 Generating with voice and pictures 9 Observing AI operations 10 Safeguarding generative AI 11 Applying generative AI patterns 12 Employing agents

**A.I. Hallucinations** Sam Zuker,2024-05-08 AI safeguards It s legacy lived on in the very protocols designed to prevent another rogue AI incident Simulating Information Retrieval Test Collections David Hawking,Bodo Billerbeck,Paul Thomas,Nick Craswell,2022-06-01 Simulated test collections may find application in situations where real datasets cannot easily be accessed due to confidentiality concerns or practical inconvenience They can potentially support Information Retrieval IR experimentation tuning validation performance prediction and hardware sizing Naturally the accuracy and usefulness of results obtained from a simulation depend upon the fidelity and generality of the models which underpin it The fidelity of emulation of a real corpus is likely to be limited by the requirement that confidential information in the real corpus should not be able to be extracted from the emulated version We present a range of methods exploring trade offs between

emulation fidelity and degree of preservation of privacy We present three different simple types of text generator which work at a micro level Markov models neural net models and substitution ciphers We also describe macro level methods where we can engineer macro properties of a corpus giving a range of models for each of the salient properties document length distribution word frequency distribution for independent and non independent cases word length and textual representation and corpus growth We present results of emulating existing corpora and for scaling up corpora by two orders of magnitude We show that simulated collections generated with relatively simple methods are suitable for some purposes and can be generated very quickly Indeed it may sometimes be feasible to embed a simple lightweight corpus generator into an indexer for the purpose of efficiency studies Naturally a corpus of artificial text cannot support IR experimentation in the absence of a set of compatible queries We discuss and experiment with published methods for query generation and query log emulation We present a proof of the pudding study in which we observe the predictive accuracy of efficiency and effectiveness results obtained on emulated versions of TREC corpora The study includes three open source retrieval systems and several TREC datasets There is a trade off between confidentiality and prediction accuracy and there are interesting interactions between retrieval systems and datasets Our tentative conclusion is that there are emulation methods which achieve useful prediction accuracy while providing a level of confidentiality adequate for many applications Many of the methods described here have been implemented in the open source project SynthaCorpus accessible at <https://bitbucket.org/davidhawking/synthacorporus>
