

## 2017 S Blockading Connections Lab Questions

11. A team of students of the 10th grade Biology Connections, a biology teacher, and students to form a hypothesis that is either true or false that would affect heart rate. The students hypothesized that working in a high temperature would decrease heart rate. They recorded working heart rates of 200 students, had them eat high protein meals, and then recorded their heart rates again. The heart rates of 200 students were lower while the heart rate of 200 students were higher than the first.

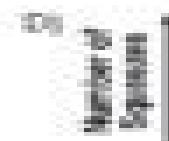

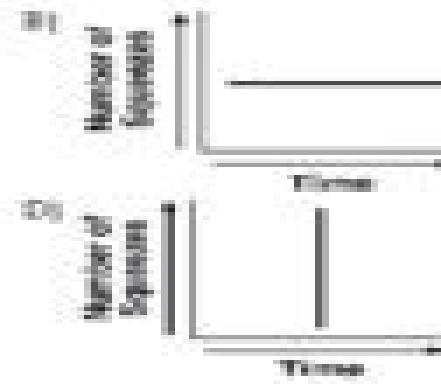

The best explanation for the observations that the heart rates of 5 students were higher after working:

- (A) the heart rate of female students are not affected by a high protein meal.
- (B) the students all participated in physical education class immediately before the test.
- (C) the students all had varying physical fitness levels and consumed different amounts of protein.
- (D) the students were all the same gender and age.

12. In the lab activity Blocking Connections, an experiment was designed to test the effect of cocaine on the ability to spin a clothespin. The number of times the clothespin was spun and served as the:

- (A) independent variable
- (B) dependent variable
- (C) hypothesis
- (D) control

13. A student is spinning and clapping clothespins as part of a lab activity. The student begins to experience muscle fatigue, and the rate at which the student is spinning and clapping the clothespins slows. Which graph best represents the relationship between time and number of clothespins spun?

14. During periods of vigorous physical activity, a person's breathing and heart rate increase. This enables the cells of the body to perform more efficiently because it helps the cells to:

- (A) release more products faster
- (B) move more glucose to muscle
- (C) reduce the amount of ATP produced
- (D) convert more oxygen to glucose

15. A person's pulse rate generally goes down while sleeping. One reason for this decrease is:

- (A) the body is producing more carbon dioxide when a person is sleeping
- (B) a person is not using energy while sleeping
- (C) a person requires less oxygen when sleeping
- (D) the body is using more nutrient while sleeping
