Critchlow, 2012-12-06 A full ranking of n items is simply an ordering of all these items of the form first choice second choice n th choice If two judges each rank the same n items statisticians have used various metrics to measure the closeness of the two rankings including Kendall's tau Spearman's rho Spearman's footrule Ulam's metric Hamming distance and Cayley distance These metrics have been employed in many contexts in many applied statistical and scientific problems This monograph presents general methods for extending these metrics to partially ranked data Here partially ranked data refers for instance to the situation in which there are n distinct items but each judge specifies only his first through k th choices where k Probability Models and Statistical Analyses for Ranking Data Michael A.
