Foodborne Microbial Pathogens Arun Bhunia, 2007-11-22 Ever since my days in veterinary school I was fascinated with the field of microbiology I always wondered how such a small microscopic organisms are capable of causing infections in other living organisms big or small young or old and healthy or immunocompromised The subject captured my imagination Many of the same microorganisms that cause diseases in animals also infect humans In recent days pathogens of animal origin impose even greater concern with increasing threat of avian influenza to cause pandemic and spread of deadly bovine spongiform encephalopathy mad cow disease and many bacterial pathogens such as Listeria E coli O157 H7 Salmonella Yersinia and Campylobacter I am especially intrigued by the cunning strategy pathogens employ for their survival in a host and their exploitation of host cellular machinery to promote their own invasion into the host Pathogenic mechanism is complex and unraveling that process requires great minds Today microbiologists cell biologists and immunologists employing many sophisticated molecular tools are unraveling that secret at a very fast pace Thus it requires a great deal of efforts to compile and update information in a textbook and it was rather a monumental task My goal with this book was to paint a bigger picture of pathogenic mechanism of foodborne pathogens which are responsible for many of modern day outbreaks and diseases worldwide and narrate the subject with easy to comprehend illustrations

Advances in microbial food safety K. Rantsiou, L. Cocolin, 2013-07-31 Since the invention of the polymerase chain reaction PCR in the 1980s applied molecular biology has progressed enormously Following technological advancements PCR analysis has become quantitative rather than qualitative Quantitative PCR qPCR revolutionized molecular approaches to food safety due to the ability to quantify specific pathogens in food New methods for studying the transcription process such as microarrays can be used to investigate the behavior of pathogens in the food environment Indeed the effects of food related conditions on gene expression in pathogenic microorganisms have already been demonstrated
