Lisp in Small Pieces Christian Queinnec,2003-12-04 This is a comprehensive account of the semantics and the implementation of the whole Lisp family of languages namely Lisp Scheme and related dialects It describes 11 interpreters and 2 compilers including very recent techniques of interpretation and compilation The book is in two parts The first starts from a simple evaluation function and enriches it with multiple name spaces continuations and side effects with commented variants while at the same time the language used to define these features is reduced to a simple lambda calculus

Denotational semantics is then naturally introduced. The second part focuses more on implementation techniques and discusses precompilation for fast interpretation, threaded code or bytecode compilation towards C. Some extensions are also described such as dynamic evaluation, reflection, macros and objects. This will become the new standard reference for people wanting to know more about the Lisp family of languages: how they work, how they are implemented, what their variants are and why such variants exist. The full code is supplied and also available over the Net. A large bibliography is given as well as a considerable number of exercises. Thus it may also be used by students to accompany second courses on Lisp or Scheme.

Inside Case-Based Reasoning Christopher K. Riesbeck, Roger C. Schank, 2013-05-13. Introducing issues in dynamic memory and case based reasoning, this comprehensive volume presents extended descriptions of four major programming efforts conducted at Yale during the past several years. Each descriptive chapter is followed by a companion chapter containing the micro program version of the information. The authors emphasize that the only true way to learn and understand any AI program is to program it yourself. To this end, the book develops a deeper and richer understanding of the content through LISP programming instructions that allow the running, modification and extension of the micro programs developed by the authors.

Handbook of Programming Languages: Functional and logic programming languages

The book begins a few pages from the LISP 1.5 Programmer's Manual, a vital token of things to come, and moves on to LISP's offspring: LISP, Scheme, Guile and CLOS.

Artificial Intelligence George F. Luger, William A. Stubblefield, 1998. This text is a treatment of the foundations of Artificial Intelligence, combining theoretical material required for intelligent problem solving with the data structures and algorithms needed for implementation.
