

Abstract 101.16: Specialized and Miscellaneous Functions of the Brain

The mammalian brain is a complex organ that is highly specialized for its function. The brain is divided into several regions, each of which has a specific function. The cerebrum is the largest part of the brain and is responsible for most of the higher functions of the brain, such as thought, memory, and emotion. The cerebellum is located at the back of the brain and is responsible for coordination and balance. The brainstem is located in the center of the brain and is responsible for basic functions such as breathing and heart rate. The peripheral nervous system (PNS) consists of all the nerves outside the brain and spinal cord. The PNS is responsible for transmitting information between the brain and the rest of the body.
