John S. Gero, 1991 Artificial Intelligence in Design 91 is a collection of 47 papers from the First International Conference on Artificial Intelligence in Design held at Edinburgh in June 1991. The papers in this book are grouped into 13 headings starting with a background of AI design systems and to which extent AI that results from being used as planning tool be applied to quality oriented design processes in architecture. A constraint driven approach to object oriented design is also shown on real world objects. The use of CADSYN in the structural design of buildings is examined along with design dependent knowledge and design independent knowledge. Discussions on empowering designers with integrated design environments are given whereby design objects may be retrieved from catalogues without requiring users to form queries. Mention is given to automated adjustment of parameter values frequently used in computer routine applications. The book also introduces the Computer Aided Design CAD as applied to architecture. Design representation using data models non monotonic reasoning in design and the cognitive aspects of design using empirical studies are discussed. Topics of the industrial applications of AI in design such as the needed steps to develop a successful AI based tool and a review of the Castlemain Project and telecommunication distribution networks follow. This book is suitable for programmers computer science students and architects and engineers who use computers in their line of work      Statistisches Handbuch, 1990      *Subject Guide to Books in Print*, 2001      **Humanistic Mathematics Network Journal**, 1992      *Guide for the Management of Expert Systems Development* Rand Corporation, 1989 This report was prepared to assist managers in the risk managed application of expert systems ES technology. Two problems that have frustrated managers and technicians who might otherwise be interested in exploring ES solutions are the seeming lack of a software engineering discipline for creating and maintaining expert systems and the fact that the software development risks associated with expert systems have not been clearly addressed. This guide focuses on ES development as a software engineering endeavor and emphasizes that as such it should be subject to much the same discipline as conventional automated information system software. The guide is meant to be used in conjunction with accepted software development methods and standards such as Department of Defense DOD Standards 2167A and 7935 1 DOD Directive 7920 1 DOD Instruction 7920 2 and the OSD Major Automated System Review Council MAISRC Guidelines for Program Managers. This document presents a step by step guideline that addresses the managerial and technical risks of each phase in the software development life cycle of systems that contain ES components.
