Hands-On GPU Programming with Python and CUDA Dr. Brian Tuomanen,2018-11-27 Build real world applications with Python 2.7 CUDA 9 and CUDA 10 We suggest the use of Python 2.7 over Python 3.x since Python 2.7 has stable support across all the libraries we use in this book Key FeaturesExpand your background in GPU programming PyCUDA scikit-cuda and NsightEffectively use CUDA libraries such as cuBLAS cuFFT and cuSolverApply GPU programming to modern data science applicationsBook Description Hands On GPU Programming with Python and CUDA hits the ground running you'll start by learning how to apply Amdahl's Law use a code profiler to identify bottlenecks in your Python code and set up an appropriate GPU programming environment You'll then see how to query the GPU's features and copy arrays of data to and from the GPU's own memory As you make your way through the book you'll launch code directly onto the GPU and write full blown GPU kernels and device functions in CUDA C You'll get to grips with profiling GPU code effectively and fully test and debug your code using Nsight IDE Next you'll explore some of the more well known NVIDIA libraries such as cuFFT and cuBLAS With a solid background in place you will now apply your new found knowledge to develop your very own GPU based deep neural network from scratch You'll then explore advanced topics such as warp shuffling dynamic parallelism and PTX assembly In the final chapter you'll see some topics and applications related to GPU programming that you may wish to pursue including AI graphics and blockchain By the end of this book you will be able to apply GPU programming to problems related to data science and high performance computing What you will learnLaunch GPU code directly from PythonWrite effective and efficient GPU kernels and device functionsUse libraries such as cuFFT cuBLAS and cuSolverDebug and profile your code with Nsight and Visual ProfilerApply GPU programming to datascience problemsBuild a GPU based deep neuralnetwork from scratchExplore advanced GPU hardware features such as warp shufflingWho this book is for Hands On GPU Programming with Python and CUDA is for developers and data scientists who want to learn the basics of effective GPU programming to improve performance using Python code You should have an understanding of first year college or university level engineering mathematics and physics and have some experience with Python as well as in any C based programming language such as C C++ Go or Java **GPU Parallel Program Development Using CUDA** Tolga Soyata,2018-01-19 GPU Parallel Program Development using CUDA teaches GPU programming by showing the differences among different families of GPUs This approach prepares the reader for the next generation and future generations of GPUs The book emphasizes concepts that will remain relevant for a long time rather than concepts that are platform specific At the same time the book also provides platform dependent explanations that are as valuable as generalized GPU concepts The book consists of three

separate parts it starts by explaining parallelism using CPU multi threading in Part I A few simple programs are used to demonstrate the concept of dividing a large task into multiple parallel sub tasks and mapping them to CPU threads Multiple ways of parallelizing the same task are analyzed and their pros cons are studied in terms of both core and memory operation Part II of the book introduces GPU massive parallelism The same programs are parallelized on multiple Nvidia GPU platforms and the same performance analysis is repeated Because the core and memory structures of CPUs and GPUs are different the results differ in interesting ways The end goal is to make programmers aware of all the good ideas as well as the bad ideas so readers can apply the good ideas and avoid the bad ideas in their own programs Part III of the book provides pointer for readers who want to expand their horizons It provides a brief introduction to popular CUDA libraries such as cuBLAS cuFFT NPP and Thrust the OpenCL programming language an overview of GPU programming using other programming languages and API libraries such as Python OpenCV OpenGL and Apple s Swift and Metal and the deep learning library cuDNN
