

Physics Fundamentals 1 Exam Study Guide 2024-2025 100%

WILLIAMS COLLEGE

1. **Newton's Laws of Motion**

- Newton's First Law of Motion: An object at rest stays at rest and an object in motion stays in motion with the same speed and in the same direction unless acted upon by an unbalanced force.
- Newton's Second Law of Motion: The acceleration of an object depends on the net force applied to it and is proportional to the mass of the object.
- Newton's Third Law of Motion: For every action, there is an equal and opposite reaction.
- Friction: A force that resists motion between two surfaces in contact.
- Normal Force: A force perpendicular to a surface that resists motion.
- Gravitational Force: The force of attraction between two objects with mass.
- Centrifugal Force: The force that appears to pull an object away from the center of a circular path.

2. **Work, Energy, and Power**

Work is the transfer of energy through the application of a force over a distance. The formula for work is:

$$W = F \cdot d \cdot \cos(\theta)$$

where F is force, d is distance, and θ is the angle between the force and the direction of motion.

Energy is the ability to do work. There are two main types of energy:

- Kinetic Energy: Energy of motion, given by the formula $E_k = \frac{1}{2}mv^2$, where m is mass and v is velocity.
- Potential Energy: Energy stored in an object due to its position or state, given by the formula $E_p = mgh$, where m is mass, g is the acceleration due to gravity, and h is height.

Power is the rate at which work is done. The formula for power is:

$$P = W/t$$

where W is work and t is time.

3. **Waves and Optics**
