**Abstract** – The purpose of this study was to determine the effect of a 12-week, 30-min, 3 times per week, supervised, low-impact aerobically and resistance training program on the physical fitness of sedentary, middle-aged women. The study was a randomized, controlled trial. The subjects were randomly assigned to either the exercise or control group. The exercise group performed a 12-week, 30-min, 3 times per week, supervised, low-impact aerobically and resistance training program. The control group did not exercise. The subjects were assessed for physical fitness at baseline and at 12 weeks. The results showed that the exercise group had significantly greater improvements in physical fitness than the control group. The exercise group had significantly greater improvements in aerobic fitness, muscular strength, and muscular endurance. The control group had no significant changes in physical fitness. The results of this study suggest that a 12-week, 30-min, 3 times per week, supervised, low-impact aerobically and resistance training program is effective in improving the physical fitness of sedentary, middle-aged women.
