The Case for Cities Vikas Mehta, Danilo Palazzo, Conrad Kickert, Christopher Auffrey, Terry Grundy, 2024-07-31 The fateful year 2020 brought dramatic challenges to American cities The COVID 19

pandemic and the civil unrest caused by the killing of George Floyd led to a cascade of negative media stories about cities often politically motivated. It seemed possible that the economic and demographic gains cities had achieved over the last few decades could be lost. In fact, there has been measurable population loss in larger cities caused by changing work life patterns and changing public perceptions about the costs and benefits of urban living. Faced with these challenges, advocates for cities must make a vigorous case for cities and show how they aren't the cause of America's social, environmental, economic, and public health problems but in fact are the places where the solutions to those problems will be found. The 38 chapters in *The Case for Cities* draw on the expertise of contributors from the academic, professional, and civic sectors to explore the creative tension between the two great values on which the vigor of cities depends: that they should be Cities of Choice (places where people who have choice want to live) and Cities of Justice (places that welcome and support people with limited choices). The book's underlying perspective is that these two values are symbiotic and that promoting both is what leads to viable, sustainable urban resurgence. This book will be of keen interest to students and practitioners in urban planning, urban design, real estate, architecture, and landscape architecture, and to urban advocates and civic leaders.

Unlocking Sustainable Cities Paul Chatterton, 2018-11-20. This book is a manifesto for real urban change. Today, our urban areas are held back by corporate greed, loss of public space, and rising inequality. This book highlights how cities are locked into unsustainable and damaging practices and how exciting new routes can be unlocked for real change. Across the world, city innovators are putting real sustainability into practice: from transforming abandoned public spaces and setting up community co-operatives to rewilding urban nature and powering up civic energy. Paul Chatterton explores the power of these city experiments that harness the creative power of the collective, focusing on five themes: compassion, imagination, experimentation, co-production, and transformation, and four city systems: mobility, energy, community, and nature. Imagining radical alternatives such as car-free, post-carbon, common, and bio-cities: this is a toolkit for unlocking real urban change.

Biomimetic and Biophilic Design as a Model for Regenerative Redevelopment of the Post-industrial San Francisco Bay Edge Mara Baum, 2005. **Key Indicators for Asia and the Pacific**, 2012. **Biophilic Urbanism** Phillip James Tabb, 2020-12-20. Biophilic Urbanism provides readers with the tools to create more nature-based urban environments that are climate-positive, sustainable, and healthy. The principles of biophilia are intended to support appreciation and direct engagement with nature to responsibly utilize on-site natural resources and to plan according to climatic conditions and local ecological processes. It seeks to create resilient and equitable human places capable of providing critical life support functions and a strong sense of community and to foster experiences that raise the human spirit, creating a sense of awe. Twenty-five pattern attributes are defined and explored, each of which contributes to these goals. Because of the dire necessity to respond to the COVID-19 pandemic, Biophilic Urbanism includes discussion of our need for connections both to nature and one another, and the physical characteristics of cities and buildings relative to the contagious qualities of the air-borne virus. Case studies found throughout.
