Kouvatsos,2016-01-09 This book presents a selection of expanded research papers from the Fourth IFIP Workshop on the Performance Modelling and Evaluation of ATM Networks It provides a fundamental source of reference on the latest research techniques and tools concerning ATM networks worldwide A number of important topics are featured including traffic modelling and characterisation models of ATM switches network management high speed LANs and MANs and routing and optimization

Challenges In Mechanics of Time-Dependent Materials and Processes in Conventional and Multifunctional Materials, Volume 2

Bonnie Antoun,H. Jerry Qi,Richard Hall,G.P. Tandon,2025-08-07 Challenges in Mechanics of Time Dependent Materials and Processes in Conventional and Multifunctional Materials Volume 2 Proceedings of the 2013 SEM Annual Conference Exposition on Experimental and Applied Mechanics the second volume of eight from the Conference brings together contributions to this important area of research and engineering The collection presents early findings and case studies on fundamental and applied aspects of Experimental Mechanics including papers in the following general technical research areas Metallic Polymeric and Composite Materials Effects of Extreme Environments including Radiation Resistance Damage and Aging Challenges in Time dependent Behavior Modeling of Low Moderate and High Strain Rates Effects of Frequency and Hysteretic Heating Effects of Inhomogeneities on the Time Dependent Behavior Composite Hybrid and Multifunctional Materials Challenges in Time dependent Behavior Modeling Viscoelastoplasticity and Damage Effects of Interfaces and Interphases on the Time Dependent Behavior Environmental and Reactive Property Change Effects on Thermomechanical and Multifunctional Behaviors Modeling and Characterization of Fabrication Processes of Conventional and Multifunctional Materials Time dependent and Small scale Effects in Micro Nano scale Testing Time dependent Processes in Biomaterials

Clean Numerical Simulation Shijun Liao,2023-10-25 This book describes the basic principles of Clean Numerical Simulation CNS proposed by the author in 2009 as well as several of its applications Unlike conventional algorithms CNS gives in a sufficiently long interval of time a convergent chaotic trajectory whose numerical noise is much lower than the true physical solution so that one can gain accurately Thus CNS provides for the first time an ability to check statistics stability of chaos leading to a completely new concept of ultra chaos which has both trajectory instability and statistics instability and thus is of a higher disorder Notably it is impossible to repeat experimental results of ultra chaos even in the statistical sense However the reproducibility of physical experiments forms a cornerstone for modern science Thus ultra chaos reveals an incompleteness of the modern science paradigm In addition it also reveals statistics stability as a precondition for use of conventional algorithms including direct numerical simulation DNS In Clean Numerical Simulation several conjectures and open problems are proposed including a modified fourth Clay millennium problem Indeed CNS opens the door for us to enter the clean numerical world of chaos and turbulence

Stochastic Optimal Control of Structures Yongbo Peng,Jie Li,2019-06-27 This book proposes for the first time a basic formulation for structural control

that takes into account the stochastic dynamics induced by engineering excitations in the nature of non stationary and non Gaussian processes Further it establishes the theory of and methods for stochastic optimal control of randomly excited engineering structures in the context of probability density evolution methods such as physically based stochastic optimal PSO control By logically integrating randomness into control gain the book helps readers design elegant control systems mitigate risks in civil engineering structures and avoid the dilemmas posed by the methods predominantly applied in current practice such as deterministic control and classical linear quadratic Gaussian LQG control associated with nominal white noises
