Introduction to Nanoscience Gabor L. Hornyak, 2008-05-15 Tomorrow's nanoscientist will have a truly interdisciplinary and nano-centric education rather than for example a degree in chemistry with a specialization in nanoscience. For this to happen the field needs a truly focused and dedicated textbook. This full color masterwork is such a textbook. It introduces the nanoscale along with the societal impacts of nanoscience then presents an overview of characterization and fabrication methods. The authors systematically discuss the chemistry, physics and biology aspects of nanoscience providing a complete picture of the challenges, opportunities and inspirations posed by each facet before giving a brief glimpse at nanoscience in action: nanotechnology. This book is written to provide a companion volume to *Fundamentals of Nanotechnology*. The two companion volumes are also available bound together in the single volume *Introduction to Nanoscience and Nanotechnology*. Qualifying instructors who purchase either of these volumes or the combined set are given online access to a wealth of instructional materials. These include detailed lecture notes, review summaries, slides, exercises and more. The authors provide enough material for both one and two semester courses. **New Technical Books** New York Public Library, 1940 **Journal of the Air & Waste Management Association**, 2008 Proceedings of the 2nd International Symposium on Temulawak and the 40th Meeting of National Working Group on Indonesia Medicinal Plant, Bogor 25-26 May 2011 C. Hanny Wijaya, 2011 *The Idea of Order*, 2010. This document explores the transition from an analog to a digital environment for knowledge access, preservation and reconstitution and the implications of this transition for managing research collections. The volume comprises three reports. The first *Can a New Research Library be All Digital?* By Lisa Spiro and Geneva Henry explores the degree to which a new research library can eschew print. The second *On the Cost of Keeping a Book* by Paul Courant and Matthew Buzzy Nielsen argues that from the perspective of long term storage digital surrogates offer a considerable cost savings over print based libraries. The final report *Ghostlier Demarcations* examines how well large text databases being created by Google Books and other mass digitization efforts meet the needs of scholars and the larger implications of these projects for research, teaching and publishing. The reports are introduced by Charles Henry; the volume includes a conclusion by Roger Schonfeld and an epilogue by Charles Henry. Individual articles contain tables, figures and footnotes. **Global Climate Change** Arnold J. Bloom, 2010. This work examines the factors responsible for global climate change and the geophysical, biological, economic, legal and cultural consequences of such changes. **New Dictionary of Scientific Biography** Noretta Koertge, 2008. Also available online as part of the Gale Virtual Reference Library under the title *Complete dictionary of scientific biography*. *Process Plant Simulation* B. V. Babu, 2004. This volume brings together all related topics for a course on Process Plant Simulation that is offered for undergraduates both in India and abroad. It would also be useful for students pursuing courses like optimisation techniques.
