Beetles Fernando E. Vega, Richard W. Hofstetter, 2014-12-29 Bark Beetles Biology and Ecology of Native and Invasive Species provides a thorough discussion of these economically important pests of coniferous and broadleaf trees and their importance in agriculture. It is the first book in the market solely dedicated to this important group of insects and contains 15 chapters on natural history and ecology, morphology, taxonomy and phylogenetics, evolution and diversity, population dynamics, resistance, symbiotic associations, natural enemies, climate change, management strategies, economics and politics, with some chapters exclusively devoted to some of the most economically important bark beetle genera, including *Dendroctonus*, *Ips*, *Tomicus*, *Hypothenemus* and *Scolytus*. This text is ideal for entomology and forestry courses and is aimed at scientists, faculty members, forest managers, practitioners of biological control of insect pests, mycologists interested in bark beetle fungal associations, and students in the disciplines of entomology, ecology and forestry. Provides the only synthesis of the literature on bark beetles. Andrew P. Sturman, Rachel Spronken-Smith, 2001 This volume comprehensively explores the unique and complex physical environment of New Zealand. Taking a systems approach to studying the biophysical environment, the text is divided into six major sections covering the origins of New Zealand, the atmospheric environment, the hydrological environment, the geomorphic environment, the biological environment, and interactions and applications. **Global Alarm** United Nations Convention to Combat Desertification (Secretariat), 2001 After a devastating dust storm that swept across Northern China in 2000, there was much interest in examining and analyzing experiences with dust storm mitigation, prevention, forecasting and control. What has emerged from the writings collected in this publication is that sand and dust storms are both a symptom and cause of desertification. They are often an early warning that things are going wrong. Combating these storms demands political, social, biological, economic, educational and engineering approaches, as well as the physical effort that has dominated efforts in the past. This publication provides an analysis of the factors contributing to dust and sandstorms, and also provides examples of how the menace can be brought under control through a series of measures ranging from mechanical interventions and bio remediation to policy change and legislative back up
