### Fundamental Subspaces

In this section we want to take a look at some important subspaces that are associated with matrices. In fact they are so important that they are often called the fundamental subspaces of a matrix. We've actually already seen one of the fundamental subspaces, the null space, [previously](#) although we will give its definition here again for the sake of completeness.

Before we give the formal definitions of the fundamental subspaces we need to quickly review a concept that we first saw back when we were looking at matrix arithmetic.

Given an  $n \times m$  matrix

$$A = \begin{bmatrix} a_{1,1} & a_{1,2} & \cdots & a_{1,m} \\ a_{2,1} & a_{2,2} & \cdots & a_{2,m} \\ \vdots & \vdots & & \vdots \\ a_{n,1} & a_{n,2} & \cdots & a_{n,m} \end{bmatrix}$$

The row vectors (we call them row matrices at the time) are the vectors in  $\mathbb{R}^n$  formed out of the rows of  $A$ . The column vectors (again we call them column matrices at the time) are the vectors in  $\mathbb{R}^m$  that are formed out of the columns of  $A$ .

**Example 1** Write down the row vectors and column vectors for

$$A = \begin{bmatrix} -1 & 5 \\ 0 & -4 \\ 9 & 2 \\ 3 & -7 \end{bmatrix}$$

**Solution**

The row vectors are,

$$r_1 = [-1 \quad 5]$$

$$r_2 = [0 \quad -4]$$

$$r_3 = [9 \quad 2]$$

$$r_4 = [3 \quad -7]$$

The column vectors are

$$c_1 = \begin{bmatrix} -1 \\ 0 \\ 9 \\ 3 \end{bmatrix}$$

$$c_2 = \begin{bmatrix} 5 \\ -4 \\ 2 \\ -7 \end{bmatrix}$$

**Spatial Econometric Interaction Modelling** Roberto Patuelli, Giuseppe Arbia, 2016-07-25 This contributed volume applies spatial and space time econometric methods to spatial interaction modeling. The first part of the book addresses general cutting edge methodological questions in spatial econometric interaction modeling which concern aspects such as coefficient interpretation, constrained estimation and scale effects. The second part deals with technical solutions to particular estimation issues such as intraregional flows, Bayesian PPML and VAR estimation. The final part presents a number of empirical applications ranging from interregional tourism competition and domestic trade to space time migration modeling and residential relocation.

*An Introduction to the Heisenberg Group and the Sub-Riemannian Isoperimetric Problem* Luca Capogna, Donatella Danielli, Scott D. Pauls, Jeremy Tyson, 2007-08-08 This book gives an up to date account of progress on Pansu's celebrated problem on the sub Riemannian isoperimetric profile of the Heisenberg group. It also serves as an introduction to the general field of sub Riemannian geometric analysis. It develops the methods and tools of sub Riemannian differential geometry, nonsmooth analysis and geometric measure theory suitable for attacks on Pansu's problem.

**Mathematical Reviews**, 2005 Conformal Graph Directed Markov Systems on Carnot Groups Vasileios Chousionis, Jeremy T. Tyson, Mariusz Urbanski, 2020-09-28 The authors develop a comprehensive theory of conformal graph directed Markov systems in the non Riemannian setting of Carnot groups equipped with a sub Riemannian metric. In particular they develop the thermodynamic formalism and show that under natural hypotheses the limit set of an Carnot conformal GDMS has Hausdorff dimension given by Bowen's parameter. They illustrate their results for a variety of examples of both linear and nonlinear iterated function systems and graph directed Markov systems in such sub Riemannian spaces. These include the Heisenberg continued fractions introduced by Lukyanenko and Vandehey as well as Kleinian and Schottky groups associated to the non real classical rank one hyperbolic spaces.

Halmos, 1995-12-31 Linear Algebra Problem Book can be either the main course or the dessert for someone who needs linear algebra and today that means every user of mathematics. It can be used as the basis of either an official course or a program of private study. If used as a course the book can stand by itself or if so desired it can be stirred in with a standard linear algebra course as the seasoning that provides the interest, the challenge and the motivation that is needed by experienced scholars as much as by beginning students. The best way to learn is to do and the purpose of this book is to get the reader to DO linear algebra. The approach is Socratic first ask a question then give a hint if necessary then finally for security and completeness provide the detailed
