Draft Work System Design Handbook ,1992 **Designing High Performance Schools** Francis Duffy,1996-04-29

When so much is being said about restructuring schools and so little is actually being done successfully it is a pleasant breath of fresh air to read *Designing High Performance Schools* There is outcome based education year round schools alternative assessment and site based management There are new methods for student evaluation a return to nongraded schools a redesigning of grouping and attempts to connect classroom experiences with community based activities Wading through this maze of possibilities and unresolved solutions comes an answer for the critical decade of the 90s If you are a school practitioner or a consultant working with schools here is the most practical step by step guidance available on how to plan conduct and evaluate a comprehensive and complex restructuring Using a model derived from the fields of socio technical systems design business process reengineering knowledge work quality improvement and organization development this book lays out every aspect needed for restructuring *Handbook of Organization Development* Thomas G. Cummings,2008 The contributors reflect the field of organizational development s rapid growth and success since its inception 50 years ago into a far more complex study than it was just a few decades ago They show how organizational development has expanded from dealing with internal problems to the need to address more strategic issues *Handbook of Methods for Designing, Monitoring, and Analyzing Dose-Finding Trials* John O'Quigley,Alexia Iasonos,Björn Bornkamp,2017-04-27 *Handbook of Methods for Designing Monitoring and Analyzing Dose Finding Trials* gives a thorough presentation of state of the art methods for early phase clinical trials The methodology of clinical trials has advanced greatly over the last 20 years and arguably nowhere greater than that of early phase studies The need to accelerate drug development in a rapidly evolving context of targeted therapies immunotherapy combination treatments and complex group structures has provided the stimulus to these advances Typically we deal with very small samples sequential methods that need to be efficient while at the same time adhering to ethical principles due to the involvement of human subjects Statistical inference is difficult since the standard techniques of maximum likelihood do not usually apply as a result of model misspecification and parameter estimates lying on the boundary of the parameter space Bayesian methods play an important part in overcoming these difficulties but nonetheless require special consideration in this particular context The purpose of this handbook is to provide an expanded summary of the field as it stands and also through discussion provide insights into the thinking of leaders in the field as to the potential developments of the years ahead With this goal in mind we present An introduction to the field for graduate students and novices A basis for more established researchers from which to build A collection of material for an advanced course in early phase clinical trials A comprehensive guide to available methodology for practicing statisticians on the design and analysis of dose finding experiments An extensive guide for the multiple comparison and modeling MCP Mod dose finding approach adaptive two stage designs for dose finding as well as dose time response models and multiple testing

in the context of confirmatory dose finding studies John O Quigley is a professor of mathematics and research director at the French National Institute for Health and Medical Research based at the Faculty of Mathematics University Pierre and Marie Curie in Paris France He is author of Proportional Hazards Regression and has published extensively in the field of dose finding Alexia Iasonos is an associate attending biostatistician at the Memorial Sloan Kettering Cancer Center in New York She has over one hundred publications in the leading statistical and clinical journals on the methodology and design of early phase clinical trials Dr Iasonos has wide experience in the actual implementation of model based early phase trials and has given courses in scientific meetings internationally Björn Bornkamp is a statistical methodologist at Novartis in Basel Switzerland researching and implementing dose finding designs in Phase II clinical trials He is one of the co developers of the MCP Mod methodology for dose finding and main author of the DoseFinding R package He has published numerous papers on dose finding nonlinear models and Bayesian statistics and in 2013 won the Royal Statistical Society award for statistical excellence in the pharmaceutical industry

Reimagining Instructional Supervision

Francis M. Duffy, 2017-03-16 The history of instructional supervision has been relatively constant From the days when the first colonists arrived and established schools for their children until today instructional supervision has consistently focused on the critical examination of a teacher's classroom behavior with the assumption that supervising individual teachers could significantly improve teaching and learning throughout a school system That assumption has proven to be flawed The author believes that the focus of instructional supervision needs to shift off of individual teachers to focus on transforming the organization design and functioning of entire school systems Instead of observing teachers working in their classrooms a reimagined instructional supervision process would focus on transforming three sets of key system variables Transform the system's environmental relationships transform the system's core and support work processes and transform the system's internal social infrastructure Supervising Knowledge Work describes the salient features of a reimagined supervision process called Knowledge Work Supervision that is designed to transform entire school systems
