Sensation, Perception and Action Johannes Zanker, 2010-03-02 With a style that is both detailed and accessible this new text from Johannes Zanker provides students with a solid understanding of how our sensory and perceptual systems operate and interact with a dynamic world It not only explains the scientific mechanisms involved but discusses the costs and benefits of these mechanisms within an evolutionary functional framework to encourage important questions such as What is a given sensory mechanism needed for What kind of problem can it solve and what are its limitations How does the environment determine how senses operate How does action affect and facilitate perception This unique interdisciplinary framework allows students to see perceiving

and acting as embedded in particular environments and directs them to think about the functional nature of these systems. The overall effect is an especially readable authoritative text on Sensation Perception and Action that really brings this fascinating topic to life. The Measurement of Sensation Donald Richard John Laming, 1997. The publication in 1957 of S. S. Stevens' famous paper 'On the psychophysical law' ignited a controversy which has continued ever since relating to people's subjective judgements of physical reality. Why is it that the perception of sensation can diverge so sharply from the magnitude of the stimulus? How should sensation be measured? Donald Laming brings together a diversity of ideas and a wealth of experimental evidence and provides a challenging new perspective on the question which has fragmented the research community for nearly 40 years. *Sensation and Perception* Steven Yantis, 2013-02-11. Written by acclaimed researcher and teacher Steven Yantis, *Sensation and Perception* shows students how scientists investigate and understand sensory and perceptual phenomena today. Like no other textbook for the course, it integrates classic and current research including the latest developments in cognitive neuroscience and brain imaging into a highly accessible portrait of the field's defining principles and experiments. Engagingly written, filled with outstanding art including 3D images and supported by dozens of interactive visual demonstrations devised by the author, it is your students' gateway to the forefront of research in sensation and perception. *Sensation and Perception* Harvey Richard Schiffman, 1995-11-24. How do the senses gather and secure information about the outside world? This book addresses this basic question by explaining how the physical world interacts with and stimulates the senses in turn, how the senses and the nervous system transform, integrate and process the stimulation. *Fundamentals of Sensation and Perception* Michael W. Levine, Jeremy M. Shefner, 1991-12. Intended for courses in sensation and perception, this book covers the anatomy, physiology and phenomenology of the way humans sense and perceive the world. It is grounded in physiology to explain perceptual phenomena on the theory that understanding sensation and perception is based in the physiology of the sensory organs and the brain. Fundamentals of Sensation and Perception Laura Levine, Shefner, 1991.
