## **Health Promotion Practice** Maggie Davies, Wendy

Macdowall, 2006-11-01 This book considers the key steps in the practical application of health promotion. It starts by showing how it is first necessary to determine the needs of a population and to review the scientific evidence to justify intervening. The wide range of approaches available are considered, including Motivational interviewing, Theatre, Mass media, Social marketing, Community development, Public policy. Finally, it discusses how to plan health promotion programmes, how to evaluate them and how to expand their impact by scaling up the activities to larger populations.

## **Health Promotion in Schools, Universities, Workplaces, and Communities** Graça S. Carvalho, Emily Darlington, Teresa Vilaça, 2024-12-17

Health education, well-being improvement and advocacy are effective health promotion strategies among cutting edge Public Health practices. Salutogenic perspectives rooted in ecological models have taken their rightful place to empower individuals and communities to change their life ecosystems and preserve and improve their health. It is imperative to shift from targeting protective or risk factors which have linear causal relationships with health conditions and/or comorbidities and encompass a systemic understanding of the role of health determinants in creating health. Individual, collective and structural ecological approaches can better reduce health inequities. Moreover, engaging the presumed beneficiaries from such strategies ensures that actual needs are identified and choices are context specific. It improves the whole implementation process as well as its results. Higher levels of participation such as co-creation imply a bottom up voluntary collaborative process rooted in values of diversity, mutual trust, openness, autonomy, freedom and respect as well as shared expertise, responsibility and decision making which are essential values in co-creating health promotion.
