*Signs for Developing Reading* Emil Holmer, 2016-05-23 Reading development is supported by strong language skills not least in deaf and hard of hearing DHH children The work in the present thesis investigates reading development in DHH children who use sign language attend Regional Special Needs Schools RSNS in Sweden and are learning to read The primary aim of the present work was to investigate whether the reading skills of these children can be improved via computerized sign language based literacy training Another aim was to investigate concurrent and longitudinal associations between skills in reading sign language and cognition in this population The results suggest that sign language based literacy training may support development of word reading In addition awareness and manipulation of the sub lexical structure of sign language seem to assist word reading and imitation of familiar signs i e vocabulary may be associated with developing reading comprehension The associations revealed between sign language skills and reading development support the notion that sign language skills provide a foundation for emerging reading skills in DHH signing children In addition the results also suggest that working memory and Theory of Mind ToM are related to reading comprehension in this population Furthermore the results indicate that sign language experience enhances the establishment of representations of manual gestures and that progression in ToM seems to be typical although delayed in RSNS pupils Working memory has a central role in integrating environmental stimuli and language mediated representations and thereby provides a platform for cross modal language processing and multimodal language development En god spr klig f rm ga bidrar till god l sutveckling inte minst hos d va och h rselskadade D H barn Studierna som ing r i avhandlingen unders ker l sutveckling hos D H elever som g r p teckenspr kiga specialsksolor och som h ller p att l ra sig att l

sa Arbetets huvudsakliga syfte var att underska om deras lsförståelse kan förbättras via datoriserad teckenspråksbaserad lärning. Ett annat syfte var att underska samtidiga och longitudinella samband mellan lsförståelse och kognition i samma population. Resultaten indikerar att teckenspråksbaserad lärning kan bidra till ordlydningsutveckling. Vidare pekar resultaten på att medvetenhet om och manipulation av teckenspråkets sublexikala struktur stöttar lsförståelsen och dessutom att imitation av kendte tecken i vokabulär var associerat med utvecklingen av barnens lärstillsättelse. Dessa fynd visar att teckenspråkskunskaper kan utgå från en grund för lärutveckling hos teckenspråkiga DH-elever. Resultaten indikerade även att arbetsminne och Theory of Mind (ToM) relaterade till lärstillsättelse i denna grupp. Vid sidan av resultaten rörande lärutveckling framkom också att teckenspråkserfarenhet leder till starkare etablering av representationer av manuella gester och vidare att barnens mentaliseringssätt utgår från en förståndad progression om förståelsen är insatserna som stöttar utvecklingen av teckenbaserade representationer och deras användning vid bearbetning av skrivet språk kan förstärka lärutvecklingen hos teckenspråkiga DH-elever. Arbetsminne förstås genom sin roll i integration mellan inkommande stimuli och språkmedierade representationer fungerar som en plattform för modalitetsverskridande språkbearbetning och multimodal språkutveckling.

### **Monthly Catalogue, United States Public Documents, 1983      Simplified Signs: A Manual**

**Sign-Communication System for Special Populations, Volume 1.** John D. Bonvillian, Nicole Kissane Lee, Tracy T. Dooley, Filip T. Loncke, 2020-07-30. Simplified Signs presents a system of manual sign communication intended for special populations who have had limited success mastering spoken or full sign languages. It is the culmination of over twenty years of research and development by the authors. The Simplified Sign System has been developed and tested for ease of sign comprehension memorization and formation by limiting the complexity of the motor skills required to form each sign and by ensuring that each sign visually resembles the meaning it conveys. Volume 1 outlines the research underpinning and informing the project and places the Simplified Sign System in a wider context of sign usage historically and by different populations. Volume 2 presents the lexicon of signs totalling approximately 1000 signs each with a clear illustration and a written description of how the sign is formed as well as a memory aid that connects the sign visually to the meaning that it conveys. While the Simplified Sign System originally was developed to meet the needs of persons with intellectual disabilities, cerebral palsy, autism or aphasia, it may also assist the communication needs of a wider audience such as healthcare professionals, aid workers, military personnel, travellers or parents and children who have not yet mastered spoken language. The system also has been shown to enhance learning for individuals studying a foreign language. Lucid and comprehensive, this work constitutes a valuable resource that will enhance the communicative interactions of many different people and will be of great interest to researchers and educators alike.
