**Narrative-based Practice in Speech-language Pathology** Jacqueline J. Hinckley, 2008 This book addresses the clinician side of the therapeutic equation by spotlighting the interactional aspects of clinical work in speech language pathology and encourages the development of interactional skills and attitudes as the clinician gains experience. The method used to explore this topic is autoethnographic narrative, a commonly used tool in other disciplines including medicine, listening to patients and occupational therapy but thus far rarely explored in speech language pathology. **Encyclopedia of Medical Anthropology** Carol R. Ember, Melvin Ember, 2003-12-31 Medical practitioners and the ordinary citizen are becoming more aware that we need to understand cultural variation in medical belief and practice. The more we know how health and disease are managed in different cultures the more we can recognize what is culture bound in our own medical belief and practice. The Encyclopedia of Medical Anthropology is unique because it is the first reference work to describe the cultural practices relevant to health in the world's cultures and to provide an overview of important topics in medical anthropology. No other single reference work comes close to matching the depth and breadth of information on the varying cultural background of health and illness around the world. More than 100 experts, anthropologists and other social scientists have contributed their firsthand experience of medical cultures from around the world. **Narrative Medicine: Trauma and Ethics** Anders Juhl Rasmussen, Morten Sodemann, 2024-05-14 This new volume repositions narrative medicine and trauma studies in a global context with a particular focus on ethics. Trauma is a rapidly growing field of especially literary and cultural studies and the ways in which trauma has asserted its relevance across disciplines which intersect with narrative medicine and how it has come to widen the scope of narrative research and medical practice constitute the principal concerns of this volume. This collection brings together contributions from established and emerging scholars coming from a wide range of academic fields within the faculty of humanities that include literary and media studies, psychology, philosophy, history, anthropology as well as medical education and health care studies. This crossing of disciplines is also represented by the collaboration between the two editors. Most of the authors in the volume use narrative medicine to refer to the methodology pioneered by Rita Charon and her colleagues at Columbia University but in some chapters the authors use it to refer to other methodologies and pedagogies utilizing that descriptor. Trauma is today understood both in the restricted sense in which it is used in the mental health field and in its more widespread popular usage in literature. This collection aspires to prolong, deepen and advance the field of narrative medicine in two important aspects by bringing together both the cultural

and the clinical side of trauma and by opening the investigation to a truly global horizon **Languages of Care in Narrative Medicine** Maria Giulia Marini, 2018-10-11 This book explains how narrative medicine can improve evidence based medicine EBM making it more effective and efficient giving patients better quality of life and offering more satisfaction to all health care providers It discusses not only the disease experienced by the person who is ill but also focuses on the context and the culture and investigates how narrative medicine can make other disciplines around the globe more applicable less manipulative and more scientific Only by integrating the narrative aspects can EBM become more effective and efficient with fewer uncured patients more satisfied patients with a better quality of life and satisfaction for all health care providers Every chapter is divided into two main sections the first presents the latest research in the field with comments and interviews with experts while the second section provides a list of practical exercises and tasks The book is intended for anyone with an interest in caring for and curing patients all care providers of care physicians general practitioners specialists nurses psychotherapists counselors social workers providers of aid healthcare managers scientific societies academics and researchers **Medical Humanities Review** ,1997
