**Micro Meso Macro: Addressing Complex Systems Couplings** Hans Liljenstrom, Uno Svedin, 2005-05-03 In the domain of science concerned with systems structure and behavior the issue of the relationship between the micro and the macro level is of key importance This book concentrates on the interplay between these levels and has a special focus on the level in between the meso level An investigation of those links is made through a number of cases from different domains of science including physics chemistry ecology social science economics and technology What is evident is that there are facets regarding meso level issues that are similar between cases but also that the domains differ in various ways This is particularly exemplified by the differences in perspectives from which the natural and social sciences deal with scaling issues The various examples provided in this book mirror its overriding theme systems complexity

**From Collective Beings to Quasi-Systems** Gianfranco Minati, Eliano Pessa, 2018-01-29 This book outlines a possible future theoretical perspective for systemics its conceptual morphology and landscape while the Good Old Fashioned Systemics GOFS era is still under way The change from GOFS to future systemics can be represented as shown in the book title by the conceptual change from Collective Beings to Quasi systems With the current advancements problems and approaches occurring in contemporary science systemics are moving beyond the traditional frameworks used in the past From Collective Beings to Coherent Quasi Systems outlines a conceptual morphology and landscape for a new theoretical perspective for systemics introducing the concept of Quasi systems Advances in domains such as theoretical physics philosophy of science cell biology neuroscience experimental economics network science and many others offer new concepts and technical tools to support the creation of a fully transdisciplinary General Theory of Change This circumstance requires a deep reformulation of systemics without forgetting the achievements of established conventions The book is divided into two parts Part I examines classic systemic issues from new theoretical perspectives and approaches A new general unified framework is introduced to help deal with topics such as dynamic structural coherence and Quasi systems This new theoretical framework is compared and contrasted with the traditional approaches Part II focuses on the process of translation into social culture of the theoretical principles models and approaches introduced in Part I This translation is urgent in post industrial societies where emergent processes and problems are still dealt with by using the classical or non systemic knowledge of the industrial phase

**Downward Causation and the Neurobiology of Free Will** Nancey Murphy, George F.R. Ellis, Timothy O'Connor, 2009-09-30 How is free will possible in the light of the physical and chemical underpinnings of brain activity and recent neurobiological experiments How can the emergence of complexity in hierarchical systems such as the brain based at the lower levels in physical interactions lead to something like genuine free will The nature of our understanding of free will in the light of present day neuroscience is becoming increasingly important because of remarkable discoveries on the topic being made by neuroscientists at the present time on the one hand and its crucial importance for the way we view ourselves as human

beings on the other A key tool in understanding how free will may arise in this context is the idea of downward causation in complex systems happening coterminously with bottom up causation to form an integral whole Top down causation is usually neglected and is therefore emphasized in the other part of the book's title The concept is explored in depth as are the ethical and legal implications of our understanding of free will This book arises out of a workshop held in California in April of 2007 which was chaired by Dr Christof Koch It was unusual in terms of the breadth of people involved they included physicists neuroscientists psychiatrists philosophers and theologians This enabled the meeting and hence the resulting book to attain a rather broader perspective on the issue than is often attained at academic symposia The book includes contributions by Sarah Jayne Blakemore George F R Ellis Christopher D Frith Mark Hallett David Hodgson Owen D Jones Alicia Juarrero J A Scott Kelso Christof Koch Hans K ng Hakwan C Lau Dean Mobbs Nancey Murphy William Newsome Timothy O Connor Sean A Spence and Evan Thompson      Systems Approaches and Their Application Mats-Olov Olsson, Gunnar Sjöstedt, 2006-01-16 This book describes the application of systems thinking across a broad field of cases representing research teaching decision support and construction All cases are presented by experts who have actually been involved in the activities they describe The broad selection of cases captures the great variation of systems thinking and how it is integrated into models and theories and solid knowledge pertaining to different substantive areas      Advances in Cognitive Neurodynamics (II) Rubin Wang, Fanji Gu, 2011-01-06 Within our knowledge the series of the International Conference on Cognitive Neurodynamics ICCN is the only conference series dedicating to cognitive neurodynamics This volume is the proceedings of the 2nd International Conference on Cognitive Neurodynamics held in 2009 which reviews the progress in this field since the 1st ICCN 2007 The topics include Neural coding and realistic neural network dynamics Neural population dynamics Firing Oscillations and Patterns in Neuronal Networks Brain imaging EEG MEG Sensory and Motor Dynamics Global cognitive function Multi scalar Neurodynamics from Physiology to Systems Theory Neural computing Emerging Technologies for Brain Computer Interfaces Neural dynamics of brain disorders      Advances in Applied Self-Organizing Systems Mikhail Prokopenko, 2014-07-08 How do we design a self organizing system Is it possible to validate and control non deterministic dynamics What is the right balance between the emergent patterns that bring robustness adaptability and scalability and the traditional need for verification and validation of the outcomes The last several decades have seen much progress from original ideas of emergent functionality and design for emergence to sophisticated mathematical formalisms of guided self organization And yet the main challenge remains attracting the best scientific and engineering expertise to this elusive problem This book presents state of the practice of successfully engineered self organizing systems and examines ways to balance design and self organization in the context of applications As demonstrated in this second edition of Advances in Applied Self Organizing Systems finding this balance helps to deal with practical challenges as diverse as navigation of microscopic robots within blood vessels self monitoring aerospace vehicles collective and modular robotics adapted for

autonomous reconnaissance and surveillance self managing grids and multiprocessor scheduling data visualization and self modifying digital and analog circuitry intrusion detection in computer networks reconstruction of hydro physical fields traffic management immunocomputing and nature inspired computation Many algorithms proposed and discussed in this volume are biologically inspired and the reader will also gain an insight into cellular automata genetic algorithms artificial immune systems snake like locomotion ant foraging birds flocking neuromorphic circuits amongst others Demonstrating the practical relevance and applicability of self organization *Advances in Applied Self Organizing Systems* will be an invaluable tool for advanced students and researchers in a wide range of fields

*Cognitive Phase Transitions in the Cerebral Cortex - Enhancing the Neuron Doctrine by Modeling Neural Fields* Robert Kozma, Walter J. Freeman, 2015-10-30 This intriguing book was born out of the many discussions the authors had in the past 10 years about the role of scale free structure and dynamics in producing intelligent behavior in brains The microscopic dynamics of neural networks is well described by the prevailing paradigm based in a narrow interpretation of the neuron doctrine This book broadens the doctrine by incorporating the dynamics of neural fields as first revealed by modeling with differential equations K sets The book broadens that approach by application of random graph theory neuropercolation The book concludes with diverse commentaries that exemplify the wide range of mathematical conceptual approaches to neural fields This book is intended for researchers postdocs and graduate students who see the limitations of network theory and seek a beachhead from which to embark on mesoscopic and macroscopic neurodynamics

**Causing Human Actions** Jesús Humberto Aguilar, Andrei A. Buckareff, 2010 The contributors first consider metaphysical issues then reasons explanations of action and finally new directions for thinking about the CTA They discuss such topics as the tenability of some alternatives to the CTA basic causal deviance the etiology of action teleologism and anticausalism and the compatibility of the CTA with theories of embodied cognition Two contributors engage in an exchange of views on intentional omissions that stretches over four essays directly responding to each other in their follow up essays Pub desc

**Sustainable Development in the Baltic and Beyond** Walter Leal Filho, A. P. Ubelis, Dina Berzina, 2006 This book documents and promotes the experiences from the 2nd Conference on Integrative Approaches Towards Sustainability SHARING held in Jurmala Latvia on May 11th to 24th 2005 Attended by over 200 delegates from across the Baltic Sea region and beyond the event provided an important contribution towards strengthening the integration of the region s RTD community and the sharing of knowledge and expertise in the Baltic across Europe including the Mediterranean and Black Sea regions and elsewhere The first part of this book contains some introductory remarks on sustainable development as a whole and on integrative approaches in particular Furthermore issues related to cleaner production and the moves towards zero emissions are outlined Part two of the book focuses on developments in the Baltic Sea Region with a special emphasis on policy implementation technologies and technologies for sustainable development In the next part of the book readers will find a special section on science for sustainable development One

special feature of this section is that papers are predominantly written by young researchers some of whom will find in this volume for the first time the chance to publish results from their works The final section of the book deals with social corporate responsibility and the environment focusing on sustainable community development corporate responsibility at an international level and concepts for education for sustainable development This publication provides a very good overview of sustainability issues in the Baltic and beyond illustrating the number of excellent works being performed by municipalities universities research agencies and NGOs also showing the various ways via which sustainability can be delivered

**Inside the City in the Greek World** Sara Owen, Laura Preston, 2009 The publication of the papers presented in this volume marks an important step in the study of ancient cities Despite having long been a focus of archaeological investigation and analysis until relatively recently they have tended to be described rather than analysed These eleven papers concentrate on analysing ancient urban centres from within exploring some of the ways in which people lived in perceived and modified their built environments The papers span several time periods from the Bronze Age to the Hellenistic era as well as geographic locations from Italy to Beirut The title of this volume thus incorporates two meanings of Greek the territory of the modern nation state and areas of the ancient world with cultural influences from the Aegean The diversity of ancient urban forms is therefore fully recognised and celebrated

**A Third Window** Robert E. Ulanowicz, 2009-04 Written by a highly accredited scientist this book offers a compelling and original alternative to outdated approaches to the life sciences It presents a metaphysical basis for living systems that significantly mitigates several purported conflicts between science and religion
