Each diagram consists of overlapping circles whose radii increase by 1 from smaller to larger.

3.

a) Mark all points of intersection between circles whose radii have a constant sum of 12. (e.g. 11+1, 10+2, 9+3, 8+4, 7+5, 6+6, ...) Connect the points that are closest to each other from circle to circle.
b) Choose a number   12, but bigger than 10 and repeat part a.

4.

Mark all points of intersection between circles whose radii have a constant difference of 8. (e.g. 10–2, 9–3, 8–5, etc...) Connect the points that are closest to each other from circle to circle. There will be two branches.

b) Choose another whole number repeat part a with this choice of radii difference.

5. Match each picture (i.e. problem #) with the conic section figure's definition below.
An ellipse is the set of all points (or locus) whose sum of distances from two points is constant.
A hyperbola is the locus of points whose difference from two other points is constant.
A parabola is the locus of all points equidistant from a point and a line.
What would the definition of the conic section for a circle be?
How could a ray be considered a conic section?
