

## What this chapter contains

The chapter contains safety instructions that you must follow when installing, operating and servicing the drive. If ignored, physical injury or death may follow, or damage may occur to the drive, motor or driven equipment. Read the safety instructions before you work on the drive.

## Use of warnings

Warnings caution you about conditions which can result in serious injury or death and/or damage to the equipment, and advise on how to avoid the danger. The warning symbols are used as follows:

**Electricity warning** warns of hazards from electricity which can cause physical injury and/or damage to the equipment.

**General warning** warns about conditions, other than those caused by electricity, which can result in physical injury and/or damage to the equipment.

## Safety in installation and maintenance

These warnings are intended for all who work on the drive, motor cable or motor.

### Electrical safety

**WARNING!** Ignoring the instructions can cause physical injury or death, or damage to the equipment.

**Only qualified electricians are allowed to install and maintain the drive!**

- Never work on the drive, motor cable or motor when input power is applied. After disconnecting the input power, always wait for 5 minutes to let the intermediate circuit capacitors discharge before you start working on the drive, motor or motor cable.

Always ensure by measuring with a multimeter (impedance at least 1 Mohm) that:

1. There is no voltage between the drive input phases U1, V1 and W1 and the ground.
  2. There is no voltage between terminals BRK+ and BRK- and the ground.
- Do not work on the control cables when power is applied to the drive or to the external control circuits. Externally supplied control circuits may carry dangerous voltage even when the input power of the drive is switched off.
