Splicing of Optical Fibers IGIC, Inc. Staff, 1994 *Fusion Splicing for Optical Fibers* AS-3 Fiber Optics and Applied Photonics Committee, 2017 This document provides an orientation to fusion splicing technology for optical fibers and fiber optic cable It is intended for managers designers installers and repair and maintenance personnel who need to understand the process of fusion splicing This technology is widely used in telecommunications and industrial applications and is finding acceptance in aerospace applications The aerospace industry has successfully integrated fiber optics as a viable technology for transmission of light Fiber optic connectors both for new connections and field repairs continue to present issues with acquisition and life cycle costs Fusion splices can be used for permanent fiber connections with a significant reduction in cost and improvement in loss and stability Another application being discussed is the use of fusion splicing to splice pre installed fiber optic cable assemblies onto pigtailed connectors allowing non terminated cables to be easily routed into a structure and terminated during the final assembly phase Specifically designed fusion splicers can be used in explosive environments found in aerospace

Fiber Optics Standard Dictionary Martin Weik, 1997-09-30 Fiber Optics Vocabulary Development In 1979 the National Communications System published Technical Information Bulletin TB 79 1 Vocabulary for Fiber Optics and Lightwave Communications written by this author Based on a draft prepared by this author the National Communications System published Federal Standard FED STD 1037 Glossary of Telecommunications Terms in 1980 with no fiber optics terms In 1981 the first edition of this dictionary was published under the title Fiber Optics

and Lightwave Communications Standard Dictionary In 1982 the then National Bureau of Standards now the National Institute of Standards and Technology published NBS Handbook 140 Optical Waveguide Communications Glossary which was also published by the General Services Administration as PB82 166257 under the same title Also in 1982 Dynamic Systems Inc Fiberoptic Sensor Technology Handbook co authored and edited by published the this author with an extensive Fiberoptic Sensors Glossary In 1989 the handbook was republished by Optical Technologies Inc It contained the same glossary In 1984 the Institute of Electrical and Electronic Engineers published IEEE Standard 812 1984 Definitions of Terms Relating to Fiber Optics In 1986 with the assistance of this author the National Communications System published FED STD 1037A Glossary of Telecommunications Terms with a few fiber optics terms In 1988 the Electronics Industries Association issued EIA 440A Fiber Optic Terminology based primarily on PB82 166257 The International Electrotechnical Commission then published IEC 731 Optical Communications Terms and Definitions In 1989 the second edition of this dictionary was published

Passive Optical Components for Optical Fiber Transmission Norio Kashima, 1995 This work discusses connection technologies used for both single and multimode fibres and explains multifibre connections such as mass fusion splice and multifibre connectors Coverage includes information on fluoride glass fibres doped fibres EDFA and the components

Fiber to Chip Fusion Splicing for Low Loss Optical Coupling Juniyali Nauriyal, 2023 Integrated photonic devices are poised to enter high volume markets such as data communications optical phased arrays and telecommunications however permanently attaching an optical fiber to a photonic chip with high optical efficiency and low cost still remains a challenge 1 4 During the past few decades the basic building blocks of silicon photonic devices have been demonstrated modulators detectors switches filters and lasers One of the remaining challenges is to develop a packaging method to permanently attach optical fibers to photonic chips with high optical efficiency and high speed while maintaining compatibility with CMOS processing without introducing changes to the fabrication process or consuming a significant area on the chip Multiple methods have been demonstrated to increase the coupling efficiency between an optical fiber and a chip while simultaneously decreasing packaging costs and increasing throughput for high volume manufacturing However current coupling methods are lossy bandwidth limited or involve complex fabrication steps 1 5 47 We present a low cost robust and low loss packaging technique of permanent optical edge coupling between a fiber and multiple fiber to a chip using fusion splicing that is scalable for high volume manufacturing and has a larger alignment tolerance We fusion splice a cleaved optical fiber and or optical fiber array to an oxide mode converter 48 at the edge of the chip The oxide mode converter helps in improving the losses and acts as an interface for fiber attachment The oxide mode converters are fabricated using photolithography and are isolated from the silicon substrate to prevent optical loss to the substrate We characterize the losses along the chip and the fiber for the c band wavelength and attach single fibers multiple fibers as well as specialty fibers to the photonic device We envision that this method can be fully automated to enable highly efficient fiber to chip coupling in

high volume applications This will help pave a path to low loss low cost optical packaging of integrated photonic devices
