Practical Aspects of Flow Assurance in the Petroleum Industry Jitendra Sangwai,Abhijit Dandekar,2022-07-07 With easily accessible oil reserves dwindling petroleum engineers must have a sound understanding of how to access technically challenging resources especially in the deepwater environment These technically challenging resources bring with them complexities around fluid flow not normally associated with conventional production systems and engineers must be knowledgeable about navigating these complexities *Practical Aspects of Flow Assurance in the Petroleum Industry* aims to provide practical guidance on all aspects of flow assurance to offer readers a ready reference on how to ensure uninterrupted transport of processed fluids throughout the flow infrastructure by covering all practical aspects of flow assurance being written in such a way that any engineer dealing with the oil and gas industry will be able to understand the material containing solved examples on most topics placing equal emphasis on experimental techniques and modeling methods and devoting an entire chapter to the analysis and interpretation of published case studies With its balance of theory and practical applications this work provides petroleum engineers from a variety of backgrounds with the information needed to maintain and enhance productivity **Microbial Enhancement of Oil Recovery - Recent Advances** E.C.

Donaldson,1991-04-03 This conference was instituted to examine field activities in Microbial Enhancement of Oil Recovery The U S Department of Energy has sponsored several field projects and the details from some of these were presented as well as a few from industry The balance of the program was concerned with new developments in research Today s oil production technology leaves one third to one half of the original oil in place in the reservoir at abandonment of secondary recovery waterflooding This leaves a very large target for microbial enhanced oil recovery which was shown by the research papers of this conference to be capable of producing up to 50% of the residual oil The field trials show that the normal projected oil production decline curve can be reversed or leveled off by microbial enhancement of oil recovery This conference has shown that a variety of applications are possible to correct oilfield problems as well as to enhance oil recovery Among these is the suppression of hydrogen sulfide production which alone is a tremendous advance because of the large quantity of sour oil production If hydrogen sulfide production can be curtailed it would increase the value of the produced oil decrease its toxicity and largely decrease its corrosiveness All of these would be welcome both in the field and at the petroleum refinery where special precautions must be taken to process sour crude oil Another very important discovery is the ability of certain bacteria to eliminate paraffin deposition around the producing well and in the tubulars This is a welcome improvement for many producers who have considerable difficulty in controlling paraffin deposition **Gathering and Transportation**

fundamental objective of this second volume is to show that wireline log data constitute a remarkable source of geological information of the utmost importance for geologists but also for reservoir engineers geophysicists and petrophysicists Too often by nature of their training geologists do not realize that wireline log data which are physical data hold in fact a tremendous variety of geological information covering practically all branches of geology They are reluctant to use these data because often they are not familiar with them and do not know how to interpret wireline logs
