Stochastic Optimal Control of Structures Yongbo Peng, Jie Li, 2019-06-27 This book proposes for the first time a basic formulation for structural control that takes into account the stochastic dynamics induced by engineering excitations in the nature of non stationary and non Gaussian processes Further it establishes the theory of and methods for stochastic optimal control of randomly excited engineering structures in the context of probability density evolution methods such as physically based stochastic optimal PSO control By logically integrating randomness into control gain the book helps readers design elegant control systems mitigate risks in civil engineering structures and avoid the dilemmas posed by the methods predominantly applied in current practice such as deterministic control and classical linear quadratic Gaussian LQG control associated with nominal white noises

Clean Numerical Simulation Shijun Liao, 2023-10-25 This book describes the basic principles of Clean Numerical Simulation CNS proposed by the author in 2009 as well as several of its applications Unlike conventional algorithms CNS gives in a sufficiently long interval of time a convergent chaotic trajectory whose numerical noise is much lower than the true physical solution so that one can gain accurately Thus CNS provides for the first time an ability to check statistics stability of chaos leading to a completely new

concept of ultra chaos which has both trajectory instability and statistics instability and thus is of a higher disorder. Notably it is impossible to repeat experimental results of ultra chaos even in the statistical sense. However, the reproducibility of physical experiments forms a cornerstone for modern science. Thus ultra chaos reveals an incompleteness of the modern science paradigm. In addition, it also reveals statistics stability as a precondition for use of conventional algorithms including direct numerical simulation (DNS). In Clean Numerical Simulation, several conjectures and open problems are proposed, including a modified fourth Clay millennium problem. Indeed, CNS opens the door for us to enter the clean numerical world of chaos and turbulence. *Performance Modelling and Evaluation of ATM Networks* Demetres D. Kouvatsos, 1995

This volume contains the papers presented at IALCCE2018, the Sixth International Symposium on Life Cycle Civil Engineering, IALCCE2018, held in Ghent, Belgium, October 28-31, 2018. It consists of a book of extended abstracts and a USB device with full papers, including the Fazlur R. Khan lecture, 8 keynote lectures, and 390 technical papers from all over the world. Contributions relate to design, inspection, assessment, maintenance, or optimization in the framework of life cycle analysis of civil engineering structures and infrastructure systems. Life cycle aspects that are developed and discussed range from structural safety and durability to sustainability, serviceability, robustness, and resilience. Applications relate to buildings, bridges, and viaducts, highways and runways, tunnels and underground structures, off-shore and marine structures, dams, and hydraulic structures, prefabricated design, infrastructure systems, etc. During the IALCCE2018 conference, a particular focus is put on the cross-fertilization between different sub-areas of expertise and the development of an overall vision for life cycle analysis in civil engineering. The aim of the editors is to provide a valuable source of cutting edge
