Emerging Technologies, Novel Crimes, and Security Hedi Nasheri, 2024-12-30 This book provides a holistic overview of the complexities of modern technological advances and their implications for crime and security. It examines the societal dilemmas that accompany these technologies, their strategic impact on geopolitics, governments, business, and civil society. The increasingly interconnected world gives rise to novel crimes and creates a new complex set of threats. Understanding this landscape is essential to strategizing for the prevention, protection, mitigation, and risk assessment of technology-related crime. Practical and approachable, this book builds knowledge and awareness of the impact of emerging technologies on crime and security among professionals, students, academicians, researchers, and policymakers. [The Age of Decentralization](#) Sam Ghosh, Subhasis Gorai, 2024-10-15 The Age of Decentralization talks about various decentralization technologies, including Web3, decentralized identity, and decentralized storage, and how they can be incorporated into traditional tech architectures to improve technical and business performance. In this book, the authors take us on a journey through the tech landscape, exploring how decentralized technologies, including Web3, are on the verge of becoming mainstream and offer a practical roadmap for understanding and embracing this shift. Web2 brought us the great centralization by centralizing not only data but also business processes, blurring the industry boundaries. So, payment platforms started offering e-commerce services, and ride-hailing services started delivering food. Scale became the most effective moat. But at the same time, these huge platforms became a magnet for security threats and started violating user privacy rights and consumer rights. The authors argue that the technological, regulatory, and social landscape is ready for the next evolution of technology systems as decentralization technologies get incorporated into traditional architectures. This book serves as a guide for readers to understand the fundamentals of Web3 along with other decentralized technologies and creates a framework for incorporating them into traditional architectures. At the same time, the authors explore the organization level as well as the macro implications of decentralized technologies. **Fashion in the Metaverse** Bradley Quinn, 2025-03-13 This book examines a significant moment in fashion's evolution when technological innovations are inspiring designers, brands, and consumers to think beyond conventional clothing in the real world and to forge fresh relationships with digital garments within 3D virtual spaces. It shows how these spaces, which are largely driven by augmented reality, virtual reality, mixed reality, and blockchain, enable users to interact with digital avatars and each other. For many, the prospect of employing new technologies is as terrifying as it is exciting. Fashion in the Metaverse aims to demystify these advanced technologies while also delving into the uncertainties and impact of others such as AI, NFTs, and Web3. Interviews with pioneers working in the industry provide further insights into the creation of virtual garments, the rise and operation of the virtual economy and business in the metaverse, and the role of avatars as digital embodiments of self-expression and identity. The book concludes with a look to fashion's future and explores the ways fashion will evolve with the

metaverse to transcend boundaries and encompass a range of influences expressions and experiences as fashion breathes its creative spirit into virtual worlds
