estimator by testing the hypothesis on which this estimator is based on and providing more complex estimators relevant when some of these hypotheses are violated Finally the third part of the book presents specific estimators devoted to special responses eg count binomial or duration data Key Features Many applications using data sets of recent academic works are developed Testing and estimation procedures using the programming framework of R and specialized packages are presented Two companion packages micsr and micsr data containing respectively functions implementing some estimation and testing procedures not available in other contributed packages and data sets used in the book are provided
