The Metaverse: A Critical Assessment Philip Brey, 2025-06-11. This book offers an extensive assessment of the nature and feasibility of the metaverse and is the first to critically examine its social and ethical implications. The metaverse is, in essence, an envisioned future merger of virtual and augmented reality, VR and AR, and the internet, enabling real-time immersive interaction and activities like work, play, socializing, and entertainment. Major tech companies like Meta, Microsoft, Apple, and NVIDIA have been investing billions in metaverse technologies, with generative AI accelerating progress. This book examines how these efforts could culminate in the metaverse, exploring its potential forms, implications, and the social and ethical challenges it may pose, along with recommendations for responsible innovation. The book is aimed at stakeholders shaping the metaverse: developers, creators, investors, business leaders, and thought leaders in technologies like VR, AR, Web3, blockchain, and AI. It also serves scholars and students in applied ethics, the social sciences, and the humanities, including fields such as media studies, psychology, and law. General readers interested in the metaverse and emerging technologies will find it both accessible and engaging. Endorsements: In this book, the talented and eloquent philosopher Philip Brey carefully explains the history and ideas behind the metaverse and the prospects for its further development and adoption. That detailed information, meticulously presented, makes this a valuable read. But that is just the start. In later chapters, Brey just as skillfully describes the opportunities and vulnerabilities that a metaverse is likely to generate. These chapters are thorough, precise, and offer profound insights into our possible futures. Some of the possibilities are exciting; others are frightening. Keith W. Miller, University of Missouri-St. Louis.

The Right Sensory Mix Diana Derval, 2022-04-08. Many companies fail to acknowledge and analyze disparities observed among customers and simply put them down to culture or emotion. New

neuroendocrinological research proves that people are rational. They just have a different biological perception of the same stimulus. Their preferences, behavior, and decisions are strongly influenced by the hundreds of millions of sensors monitoring their body and brain. People with more taste buds are, for example, sensitive to bitterness and are more likely to drink their coffee with sugar or milk or to drink tea. This book helps product managers, marketers, and corporate decision makers understand and predict customers' behavior and preferences. It provides the tools to design the right sensory mix: color, shape, depth, taste, smell, texture, and sound for each product and fine tune their positioning and range for every local market. Using cases from different sectors, the author shows that this approach delivers planet and people friendly innovations which have a higher chance of success in the market.
