How Oceans Affect the Weather

By Tim Hardwick

Read the passage. Then answer the questions.

The ocean covers 71% of the Earth's surface and, as a result, absorbs the majority of the sun's radiation. This makes it crucial to heating the planet. In fact, the top three meters' of water in the ocean holds as much heat as the Earth's entire atmosphere. When this water is heated further, it evaporates into the air and increases temperature and humidity levels to form rain and storms, which are carried far and wide by the trade winds that encircle Earth.

But the ocean doesn't just store the sun's energy - it also cools and warms the surrounding atmosphere in various ways. For instance, when the air is cooler than the seawater, the ocean transfers heat to the lower atmosphere, which in turn becomes less dense as the molecules in the air are forced further apart. This results in a low-pressure air mass over that region of ocean and because air flows from areas of higher pressure to areas of low pressure, winds are diverted towards the low-pressure area. In some cases, fast-moving jet streams at high altitude are drawn into the lower region, creating conditions for the perfect storm. For example, when ocean water with a temperature of more than 26.5°C evaporates into the air, the warm air rises and cooler air descends, rotating around the low-pressure area as it does so. As the velocity of its spin increases, the wind grows in intensity, raising the likelihood of a hurricane. These currents move along the surface of the ocean and in deep water (below 300m), circulating the planet in a 1,000-year cycle that regulates its climate. Without ocean currents, regional temperatures would be more extreme and make much less of the land habitable - the Earth's Equator would be unbearably hot. That's not the only way the ocean protects our survival. It also helps to slow global warming by removing carbon dioxide from the atmosphere.

Answer the questions.

1. What is the main idea of the whole passage?
2. Explain what you learned.
3. Write a short summary that tells what the passage explains. Include only the most important information.

Cheryl Cisero Durwin and Marla Reese Weber's *EdPsych Modules* uses an innovative implementation of case studies and a modular format to address the challenge of effectively connecting theory and research to practice. Each module is a succinct stand-alone topic that represents every subject found in traditional chapter texts and can be used in any order for maximum flexibility in organizing your course. Each of the book's eight units of modules begins with a set of four case studies: early childhood, elementary, middle school, and secondary, and ends with Assess and Reflect and Evaluate questions and activities to encourage comprehension and application of the research and theories presented. The case approach and the extensive pedagogy that support it allows students to constantly see the applications of the theories and research that they are studying in the text.
