Sadowski's book provides an accessible account of the hierarchy of communication. Divided into two parts, this book argues in the first section that a deductive semiotic theory generates communication situations of increasing complexity from contiguous communication to indirect referential forms based on indexical, iconic, and symbolic signs. Within this system, Sadowski explains how key concepts of the semiotic model, such as information, parainformation, and metainformation, can account for degrees of cognitive complexity of communication processes, including the perception and interpretation of signs on literal and figurative levels. After this clear, step-by-step exposition of the theory of interacting systems, Systemic Semiotics then explores various applications of this theory, providing new insights into problems subsumed under communication studies, cultural theory, literary and film studies, and psychology.
