**Generators of Strongly Continuous Semigroups** J. A. van Casteren, 1985 This research note contains some recent results in the theory of strongly continuous semigroups of linear operators Topics covered include the Feynman Kac formalism with applications to Schrödinger operators positivity preserving semigroups quadratic form theory holomorphic semigroups and bounded one parameter groups An appendix deals with some aspects of Feynman path integrals A number of previously inaccessible results in semigroup theory are presented with full proofs This work will be useful both for those undertaking research as well as for graduate students a basic knowledge of functional analysis and probability theory are the only prerequisites Bulletin (new Series) of the American Mathematical Society, 1894 Grand Unified Theorem G. A. Oyibo, 2001 General theorem providing a mathematical basis for a grand Unified Field Theory GUT is presented The proof of the theorem is shown to be a recent work entitled Generalised Mathematical Proof of Einstein's Theory Using a New Group Theory which has been reviewed by the American Mathematical Society This work provides generic solutions to the unified

field from which both the Newtonian and Einsteinian gravitational fields seem to be recoverable Furthermore the electromagnetic field seems to be recoverable also from these solutions Since the investigation does not assume the existence of particles a priori matter could therefore be interpreted as high field intensity Therefore nuclear force fields strong and weak seem to be included The solution seems to mathematically represent the modification of space time predicted by Einstein s general relativity theory      **Books in Print Supplement** ,1994
