Scanning Transmission Electron Microscopy Alina Bruma, 2020-12-20 Scanning Transmission Electron Microscopy is focused on discussing the latest approaches in the recording of high fidelity quantitative annular dark field ADF data. It showcases the application of machine learning in electron microscopy and the latest advancements in image processing and data interpretation for materials notoriously difficult to analyze using scanning transmission electron microscopy STEM. It also highlights strategies to record and interpret large electron diffraction datasets for the analysis of nanostructures. This book Discusses existing approaches for experimental design in the recording of high fidelity quantitative ADF data. Presents the most common types of scintillator photomultiplier ADF detectors along with their strengths and weaknesses. Proposes strategies to minimize the introduction of errors from these detectors and avenues for dealing with residual errors. Discusses the practice of reliable multiframe imaging along with the benefits and new experimental opportunities it presents in electron dose or dose rate management. Focuses on supervised and unsupervised machine learning for electron microscopy. Discusses open data formats, community driven software and data repositories. Proposes methods to process information at both global and local scales and discusses avenues to improve the storage transfer analysis and interpretation of multidimensional datasets. Provides the spectrum of possibilities to study materials at the resolution limit by means of new developments in instrumentation. Recommends methods for quantitative structural characterization of sensitive nanomaterials using electron diffraction techniques and describes strategies to collect electron diffraction patterns for such materials. This book helps academics, researchers and industry professionals in materials science, chemistry, physics and related fields to understand and apply computer science derived analysis methods to solve problems regarding data analysis and interpretation of materials properties
