## Stage 1: Right After Eating

- Carbohydrates from food are converted into glucose (sugar) and released into the bloodstream.
- Blood sugar level rises.
- Insulin stimulates the conversion of glucose into glycogen as energy storage.

## Stage 2: 3 Hours After Eating

- While insulin works, blood sugar level drops.
- In a non-fasting state, glycogen is used as energy.
- Excess glycogen that is not used is stored in the body as fats.

## Stage 3: 9 Hours After Eating

- As blood sugar levels continue to drop, the body reacts by converting glycogen back into glucose and releasing it into the bloodstream.
- Fat is not yet used as an energy source, as there is still glucose and glycogen available.

## Stage 4: 11 Hours After Eating

- Now that the stored glycogen has been almost used up, a metabolic switch is flipped.
- Fat is burned as it is used as energy.

## Stage 5: 14-16 Hours After Eating

- As fat-burning continues, fatty acids are converted into ketones via ketosis.
- Ketones provide energy to the brain, heart and other vital organs.

[The Complete Guide to Intermittent Fasting](#) Charlie Mason, 2017-10-31 If you need to lose weight, look great, reduce inflammation, boost your immunity, or a myriad of other benefits, then you should consider one of the various intermittent fasting methods. There are different forms of intermittent fasting, so if you want to fast responsibly, then you should find the type of fasting that suits you best. For instance, there is the 16/8 fasting where you fast for 16 hours and then eat your meals within the remaining 8 hours. Then there is the alternate-day fast where you fast on one day and eat normally the next. You may also choose the extended fast where you fast for a longer period of time, such as 8 days or more. Traditional fasting has proven to be ineffective with many people unable to cope with the tough requirements. Ordinarily, people would fast from dawn to dusk for probably an entire month, having to endure days on end without proper meals. Then, once the benefits of fasting are achieved, they would resume normal life, only for the problems to creep back again. This can be very frustrating. Fortunately, intermittent fasting solves this challenge. Rather than go through lengthy periods of fasting, all you need to do is identify the most suitable intermittent type of fasting. For instance, you may choose the 16/8 format where you go for 16 hours without eating anything and only eat within an 8-hour window in any given day. Fortunately, the 16 hours of fasting include your sleeping time, so you will be asleep for about half of that time. Intermittent fasting has gained popularity because it offers choice, is easy to handle, and has a lot of benefits, but without the rigors and disadvantages of traditional ways of fasting. If you need to lose weight, look great, reduce inflammation, boost your immunity, or a myriad of other benefits, then you should consider one of the various intermittent fasting methods.
