## Cooling Systems

To ensure proper engine cooling, make sure the ground between cooling fins and other external surfaces of the engine are kept clean at all times.

**NOTICE:** Perform this maintenance procedure at the interval specified in the Operator's Manual.

**IMPORTANT:** The engine that powers the Workman M100 is air-cooled. Operating the engine with dirty or plugged cooling fins or a plugged or dirty blower housing will result in engine overheating and damage.

1. Park machine on a level surface, stop engine, discharge parking brake and remove key from the ignition switch.

2. Raise engine box and support with prop rod.

3. Carefully remove spark plug wires from the spark plug to prevent the engine from starting unexpectedly.

**IMPORTANT:** Never clean engine with pressurized water. Water could enter and contaminate the fuel system.

4. Clean cooling fins on both cylinder heads (Fig. 3).

5. Clean rotating screen and blower housing oil dam and blades.

6. If necessary, remove rotating screen and blower housing from engine for more thorough engine cleaning.

**IMPORTANT:** Never operate engine without the rotating screen and blower housing installed. Overheating and engine damage will result.

7. Make sure rotating screen and blower housing are properly installed to the engine if removed.

8. Attach spark plug wires to spark plugs.

9. Lower and secure engine box.
