*a.* The ultimate source of variation. Individual mutations occur so rarely that mutation alone usually does not change allele frequency much.

*b.* A very potent agent of change. Individuals or gametes move from one population to another.

*c.* Inbreeding is the most common form. It does not alter allele frequency but changes the proportion of heterozygotes.

Jane Brockmann, 2008-03-13 The study of alternative reproductive tactics the behavioural strategies used by individuals to increase their reproductive success is an evolutionary puzzle and one of great interest to researchers For instance why do some males guard both nest and eggs while others sneak into nests while pairs are spawning and fertilise those eggs The field offers a special opportunity to study the evolution and functional causes of phenotypic variation which is a general problem in the field of evolutionary biology By integrating both mechanistic psychological and evolutionary behavioural ecology perspectives and by covering a great diversity of species Alternative Reproductive Tactics addresses this integrated topic of longstanding interest bringing together a multitude of otherwise scattered information in an accessible form that is ideal for graduate students and researchers Cultural Anthropology Study Guide James G.
