**Perinatology** Renato Augusto Moreira de Sá, Eduardo Borges da Fonseca, 2021-11-18 This book presents the latest evidence based guidelines for perinatal management and is designed to help obstetricians and neonatologists minimize complications and offer patients the best possible care. Since 1960 there has been a significant increase in basic and clinical investigations on normal and pathological pregnancy in the developed world. This has provided insights into the physiopathology of pregnant women, fetuses and newborns and led to the development of new technologies bringing about a new medical subspecialty perinatal medicine. The book is divided into eight main sections. The first examines basic periconceptional care and discusses the ethical aspects of perinatology. The next section focuses on prenatal considerations such as the nutritional aspects of gestation and puerperium, physical exercise during pregnancy, routine laboratory tests, prenatal care of multiple gestations and the role of the neonatologist in prenatal care. The third and fourth sections then explore fetal evaluation and clinical intercurrences in pregnancy respectively. The next section addresses pregnancy complications, prevention, diagnosis and management. The sixth section covers the basic aspects of congenital infections and the seventh examines labor and delivery aspects. Lastly the final section includes chapters on neonatal assistance. Written by leading experts in obstetrics, neonatology and perinatology this thoroughly updated comprehensive resource reflects the latest information in all areas including genetics and imaging.

**Anaesthesia and Intensive Care in Neonates and Children** I. Salvo, D. Vidyasagar, 2013-04-17 The anesthesia and intensive care in infants and children have assumed positions of primary importance in contemporary medicine. In these delicate sectors of medicine clinical research activities must be continually supported by interdisciplinary collaborations. Neonatal and pediatric intensive care requires that all involved physicians including the surgeon and anesthesiologist be willing to work together as a team. However coordination of the various pathophysiological and clinical aspects of neonatal and pediatric critical medicine is highly complex. A complete and current review of the anaesthesia and intensive care of infants and children must include discussions of morbidity rates so as to guide the clinicians in choosing the diagnostic approach as well as of monitoring techniques appropriate to support the therapeutic decision. Recent progress in intensive care medicine for infants and children has been

significant *Global Women's Health* Zhengchao Wang,2021-12-22 This book provides a comprehensive overview of the latest women's health research to benefit the global population of women. **Technologies for Neonatal Care in LMICs** Olugbenga A. Mokoulu, John Kuumuori, Ganle, Tina Marye Slusher, Hippolite Onyejiaka Amadi, 2024-09-20. Newborn babies are arguably the most vulnerable class of patients in any society. They are entirely incapable of surviving on their own without external help from carers and society. A poorly attended newborn will more likely die than one who received well-guided and knowledgeable care. Therefore, the neonatal mortality rate of any society represents a quick measure of the efficiency of its healthcare system available technologies and knowledge base. It is common knowledge that low and middle-income countries (LMICs) contribute over 80% of the global annual burden of neonatal deaths. Limited access to sustainable technologies for neonatal care is one of the major impediments to lowering neonatal mortality in LMICs. Highly sophisticated technologies as applied in high-income countries (HICs) may be unaffordable and unsustainable at LMICs; however, a well-crafted basic technology may be appreciably effective, lifesaving, affordable, and easily maintainable by the indigenous people. The promotion, adaptation, implementation, and scale-up of such appropriate technologies by other LMICs could offer them the quickest route to better neonatal survival.
