Manual of Neotropical Birds Emmet Reid Blake, 1977 Key Areas for Threatened Birds in the Neotropics David C. Wege, Adrian J. Long, 1995-10-17 Approximately 3 600 bird species occur in the 21 countries of mainland Central and South America of which 290 are listed as threatened Taking a country by country site based approach this book documents the 596 most important areas for the conservation of these threatened birds Introductory chapters define Key Areas and the distribution of threatened species describe habitats threats and conservation and identify the gaps in our knowledge of Neotropical birds *Behavioral Ecology of Neotropical Birds* Juan Carlos Reboreda, Vanina Dafne Fiorini, Diego Tomás Tuero, 2019-04-24 This book covers central aspects of behavioral ecology including sexual selection social and genetic mating systems cooperative breeding brood parasitism brood reduction migration personalities and communication Over the past several years Neotropical bird species from temperate to tropical latitudes of South America have been extensively studied yielding valuable insights into the evolutionary mechanisms that drive their behavioral traits In this book international experts provide a general overview of main behavioral aspects They also present the main findings of their work including experimental approaches to testing the most accepted behavioral theory in their model systems In closing they propose new theoretical frameworks and future research directions As such the book provides a comprehensive and updated guide for all researchers students and professionals whose work involves the study and management of birds across the Neotropical region **Manual of Neotropical Birds, Volume 1** Emmet Reid Blake, 1977-07-01 Containing more than one third of the world's bird species the neotropical region surpasses all other zoogeographic regions in the diversity of its avian fauna Though the exploration and cataloging stages of ornithology are now virtually complete new species and undescribed subspecies of birds are still occasionally discovered In this manual Emmet R Blake has drawn on his experience of forty eight years in the field and laboratory to prepare a comprehensive detailed and authoritative synopsis of the avifauna of tropical America as now known **Neotropical Migratory Birds** Richard M. DeGraaf, John H. Rappole, 1995 Thrushes warblers vireos and tanagers are probably the most familiar of the Neotropical migrants birds that breed in the United States and Canada then journey to spend the winter in the Caribbean Mexico or southward But this extraordinary group actually comprises a large number of diverse species including waterfowl shorebirds terns hawks flycatchers and hummingbirds In

their compendious review of information on these birds Richard M DeGraaf and John H Rappole illuminate the need for a thorough understanding of the ecology of each species one that extends throughout the entire life cycle The authors argue convincingly that conservation efforts must be based on such an understanding and carried out across a species range not limited to the breeding grounds This book is the first to summarize in one volume much needed practical data about the distribution and breeding habitat requirements of migratory birds in North and South America The body of the book consists of natural history accounts of more than 350 species of Neotropical migrants including a brief description of each bird s range status habitats on breeding grounds nest site and wintering areas The authors provide a complete range map of each species distribution in the Western Hemisphere as well as notes on the distribution basic data that until recently have largely been unavailable in usable form to ornithologists and land and resource managers An appendix lists species that are increasing or decreasing at significant rates in various physiographic regions of North America
