

## LIS 534 LAB 1: INTERNET BASICS

This lab covers fundamental concepts of network organization, focusing on the client server model for network resources such as web pages and file storage. The procedure includes uploading files via ftp to a web folder but does not cover much of HTML, which is left for more focused coverage in future labs. This lab assumes basic experience using a web browser and e-mail.

This lab covers topics that are not exactly part of this course, but is important to prepare you for working with the technical side of web design that is covered in this course. So, feel free to ask a friend to help you do this lab. The goal of this lab is to help you understand the client-server structure of the Web so that you know how FTP works and how to publish web pages so that anyone with an Internet connection and a browser can access them.

### Vocabulary

All key vocabulary used in this lab are listed below, with closely related words listed together:

• host, IP address, hostname	• HTTP, FTP
• hierarchy	• user name, password
• server, client	• local, remote
• web server, web browser (client)	• upload, download
• URL	• file properties, permissions

### Post-lab Questions

Write your answers after completing the lab, but read them carefully now and keep them in mind during the lab.

1. HTTP and FTP are both standard ways of sending/receiving files through a network. How do they compare with respect to privacy? How do they compare with respect to convenience?
2. Is it correct to say that folders/directories directly contain data? Why or why not?
3. Discuss at least one way in which pathnames and URLs are similar. How can you recognize whether something is a pathname or a URL? (I.e., what is visibly different about them?)

### Discussion and Procedure

#### Part 1. Domain, Hostnames and IP Addresses

**Hostnames instead of IPs.** Every computer on the Internet has a unique numeric address called an *IP address*. An IP address is actually composed of four numbers, each in the range 0 to 255, separated by periods which we read as, "dot." IP addresses are hard for humans to remember, so we usually identify networked computers using *hostnames*, instead. (Networked computers are often called *hosts*, hence, "hostnames.") Hostnames are
