

Introduction to Networks (Version 7.00) – Modules 14 – 15: Network Application Communications Exam

1. Which action is performed by a client when establishing communication with a server via the use of UDP at the transport layer?

- The client sets the window size for the session.
- The client sends an SYN to the server to start the 3-way handshake.
- **The client randomly selects a source port number.**
- The client sends a synchronization segment to begin the session.

2. Which transport layer feature is used to guarantee session establishment?

- UDP ACK flag
- **TCP 3-way handshake**
- UDP sequence number
- TCP port number

3. What is the complete range of TCP and UDP well-known ports?

- 0 to 255
- **0 to 1023**
- 256 – 1023
- 1024 – 49151

4. What is a socket?

- the combination of the source and destination IP address and source and destination Ethernet address
- **the combination of a source IP address and port number or a destination IP address and port number**
- the combination of the source and destination sequence and acknowledgment numbers
- the combination of the source and destination sequence numbers and port numbers

5. A PC is downloading a large file from a server. The TCP window is 1000 bytes. The server is sending the file using 100-byte segments. How many segments will the server send before it requires an acknowledgment from the PC?

- 1 segment
- **10 segments**
- 100 segments
- 1000 segments

Explanation: With a window of 1000 bytes, the destination host accepts segments until all 1000 bytes of data have been received. Then the destination host sends an acknowledgment.

6. Which factor determines TCP window size?

- the amount of data to be transmitted
- the number of services included in the TCP segment
- **the amount of data the destination can process at one time**
- the amount of data the source is capable of sending at one time

Explanation: Window is the number of bytes that the sender will send prior to expecting an acknowledgement from the destination device. The initial window is agreed upon during the session startup via the three-way handshake between source and destination. It is determined by how much data the destination device of a TCP session is able to accept and process at one time.

Exams in a Nutshell Pawan K. Bhardwaj,2007-03-27 If you re preparing for the new CompTIA 2006 certification in A or the

current Network and Security certifications you'll find this book invaluable. It provides all the information you need to get ready for these exams including the four new A exams, the required Essentials exam, and three elective exams that pertain to your area of specialization. As with other O'Reilly Nutshell books for certification exams, A Network and Security in a Nutshell follows a proven style and approach. It reviews all of the topics needed to master each exam in a remarkably concise format with required knowledge boiled down to the core. Instead of plowing through 500 to 700 pages to prepare for each exam, this book covers each one in approximately 150 pages. And because the objectives for the three elective A exams are redundant and the book covers them in one section, the exams covered include:

- A Essentials Required for A 2006 certification EXAM 220 602
- For the A IT Technician specialization EXAM 220 603
- For the A Remote Support Technician specialization EXAM 220 604
- For the A IT Depot specialization EXAM N10 003
- For Network Certification EXAM SYO 101
- For Security Certification

Each exam is covered in three parts: Exam Overview, Study Guide, and Prep and Practice. Plenty of detailed tables and screen shots are included along with study notes and practice questions. Once you have completed the exams successfully, you will find this all in one book to be a valuable reference to core administration and security skills.
