Adaptivity and Learning Reimer Kühn, Randolph Menzel, Wolfram Menzel, Ulrich Ratsch, Michael M. Richter, Ion-Olimpiu Stamatescu, 2013-06-29 Adaptivity and learning have in recent decades become a common concern of scientific disciplines. These issues have arisen in mathematics, physics, biology, informatics, economics, and other fields more or less simultaneously. The aim of this publication is the interdisciplinary discourse on the phenomenon of learning and adaptivity. Different perspectives are presented and compared to find fruitful concepts for the disciplines involved. The authors select problems showing representative traits concerning the frame up the methods and the achievements rather than to present extended overviews.

Neural Information Processing Akira Hirose, Seiichi Ozawa, Kenji Doya, Kazushi Ikeda, Minho Lee, Derong Liu, 2016-09-30 The four volume set LNCS 9947, LNCS 9948, LNCS 9949, and LNCS 9950 constitutes the proceedings of the 23rd International Conference on Neural Information Processing (ICONIP 2016) held in Kyoto, Japan, in October 2016. The 296 full papers presented were carefully reviewed and selected from 431 submissions. The 4 volumes are organized in topical sections on deep and reinforcement learning, big data analysis, neural data analysis, robotics and control, bio-inspired energy efficient information processing, whole brain architecture, neurodynamics, bioinformatics, biomedical engineering, data mining, and cybersecurity. Workshop topics include machine learning, neuromorphic hardware, sensory perception, pattern recognition, social networks, brain-machine interface, computer vision, time series analysis, data driven approach for extracting latent features, topological and graph based clustering methods, computational intelligence, data mining, deep neural networks, computational and cognitive neurosciences, theory and algorithms.

Neuro-Dynamic Programming Dimitri Bertsekas, John N. Tsitsiklis, 1996-11-01 This is historically the first book that fully explained the neuro dynamic programming reinforcement learning methodology, a breakthrough in the practical application of neural networks and dynamic programming to complex problems of planning, optimal decision making, and intelligent control. Neuro dynamic programming uses neural network approximations to overcome the curse of dimensionality and the curse of modeling that have been the bottlenecks to the practical application of dynamic programming and stochastic control to complex problems. The methodology allows systems to learn about their behavior through simulation and to improve their performance through iterative reinforcement. This book provides the first systematic presentation of the science and the art behind this exciting and far reaching methodology. It develops a comprehensive analysis of reinforcement learning algorithms and guides the reader to their successful application through case studies from complex problem areas. It contains material that is not available elsewhere in book form such as a comprehensive and rigorous analysis of temporal difference methods, Q learning, and error bounds associated with various methods.

Analytical Methods for Dynamic Modelers Hazhir Rahmandad, Rogelio Oliva, Nathaniel D. Osgood, 2015-11-13 A user friendly introduction to some of the most useful analytical tools for model building, estimation and analysis, presenting key methods and examples. Energy-Efficient Distributed Computing Systems Albert Y. Zomaya,Young Choon Lee,2012-07-26 The energy consumption issue in distributed computing systems raises various monetary environmental and system performance concerns Electricity consumption in the US doubled from 2000 to 2005 From a financial and environmental standpoint reducing the consumption of electricity is important yet these reforms must not lead to performance degradation of the computing systems These contradicting constraints create a suite of complex problems that need to be resolved in order to lead to greener distributed computing systems This book brings together a group of outstanding researchers that investigate the different facets of green and energy efficient distributed computing Key features One of the first books of its kind Features latest research findings on emerging topics by well known scientists Valuable research for grad students postdocs and researchers Research will greatly feed into other technologies and application domains

Techniques for Adaptive Control Vance VanDoren,2002-10-31 Techniques for Adaptive Control compiles chapters from a team of expert contributors that allow readers to gain a perspective into a number of

different approaches to adaptive control In order to do this each contributor provides an overview of a particular product how it works and reasons why a user would want it as well as an in depth explanation of their particular method This is one of the latest technologies to emerge in the instrumentation and control field These latest control methodologies offer a means to revolutionize plant and process efficiency response time and profitability by allowing a process to be regulated by a form of rule based AI without human intervention Rather than the common academic based approach that books on this subject generally take the contributions here outline practical applications of adaptive control technology allowing for a real look inside the industry and the new technologies available Written by a team of contributors from the industry s best known product manufacturers and software developers Provides real insight into new technologies available in the industry Outlines practical applications of adaptive control technology
