Engineering Tools and Solutions for Sustainable Transportation Planning

Knoflach, Hermann, Ocalir-Akunal, Ebru V., 2017-02-14 While modern cities continue to grow and become more efficient in many sectors as their population increases public transportation has not yet caught up As a significant industry in contemporary society further progress in transportation systems is more vital than ever Engineering Tools and Solutions for Sustainable Transportation Planning is an informative reference source that outlines why current transportation systems have become inefficient in modern societies and offers solutions for the improvement of transportation infrastructures Highlighting key topics such as parking organization car ownership energy consumption and highway performance this is a detailed resource for all practitioners academics graduate students and researchers that are interested in studying the latest trends and developments in the transportation sector

Machine Learning Sergios Theodoridis, 2025-03-01

Machine Learning From the Classics to Deep Networks Transformers and Diffusion Models Third Edition starts with the basics including least squares regression and maximum likelihood methods Bayesian decision theory logistic regression and decision trees It then progresses to more recent techniques covering sparse modelling methods learning in reproducing kernel Hilbert spaces and support vector machines Bayesian learning is treated in detail with emphasis on the EM algorithm and its approximate variational versions with a focus on mixture modelling regression and classification Nonparametric Bayesian learning including Gaussian Chinese restaurant and Indian buffet processes are also presented Monte Carlo methods particle filtering probabilistic graphical models with emphasis on Bayesian networks and hidden Markov models are treated in detail Dimensionality reduction and latent variables modelling are considered in depth Neural networks and deep learning are thoroughly presented starting from the perceptron rule and multilayer perceptrons and moving on to convolutional and recurrent neural networks adversarial learning capsule networks deep belief networks GANs and VAEs The book also covers the fundamentals on statistical parameter estimation and optimization algorithms Focusing on the physical reasoning behind the mathematics without sacrificing rigor all methods and techniques are explained in depth supported by examples and problems providing an invaluable resource to the student and researcher for understanding and applying machine learning concepts New to this edition The new material includes an extended coverage of attention transformers large language models self supervised learning and diffusion models Provides a number of case studies and applications on a

variety of topics such as target localization channel equalization image denoising audio characterization text authorship identification visual tracking change point detection hyperspectral image unmixing fMRI data analysis machine translation and text to image generation Most chapters include a number of computer exercises in both MatLab and Python and the chapters dedicated to deep learning include exercises in PyTorch New to this edition The new material includes an extended coverage of attention transformers large language models self supervised learning and diffusion models

approach to the issue of data quality in pattern recognition Detailing foundational concepts before introducing more complex

methodologies and algorithms this book is a self contained manual for advanced data analysis and data mining Top down organization presents detailed applications only after methodological issues have been mastered and step by step instructions help ensure successful implementation of new processes By positioning data quality as a factor to be dealt with rather than overcome the framework provided serves as a valuable versatile tool in the analysis arsenal For decades practical need has inspired intense theoretical and applied research into pattern recognition for numerous and diverse applications Throughout the limiting factor and perpetual problem has been data its sheer diversity abundance and variable quality presents the central challenge to pattern recognition innovation Pattern Recognition A Quality of Data Perspective repositions that challenge from a hurdle to a given and presents a new framework for comprehensive data analysis that is designed specifically to accommodate problem data Designed as both a practical manual and a discussion about the most useful elements of pattern recognition innovation this book Details fundamental pattern recognition concepts including feature space construction classifiers rejection and evaluation Provides a systematic examination of the concepts design methodology and algorithms involved in pattern recognition Includes numerous experiments detailed schemes and more advanced problems that reinforce complex concepts Acts as a self contained primer toward advanced solutions with detailed background and step by step processes Introduces the concept of granules and provides a framework for granular computing Pattern recognition plays a pivotal role in data analysis and data mining fields which are themselves being applied in an expanding sphere of utility By facing the data quality issue head on this book provides students practitioners and researchers with a clear way forward amidst the ever expanding data supply
