

PATTERNS OF CRUSTAL ACTIVITY

Pattern of Crustal Activity Lab

Mountains form when tectonic plates collide. The mountains they form are called mountains. These plates are built upon a semi-fluid layer beneath them called the asthenosphere. These plates are always moving, and where they interact with each other, we see interesting geological activity like earthquakes, volcanic eruptions, and mountain formation. In this lab, you'll explore how these events are not random but follow specific patterns. By looking at various mountain ranges, you'll be able to predict where mountains and volcanoes will form and why. This will help you understand the underlying geological processes more. You will then use your knowledge to predict where mountains and volcanoes will form in the future.

Objectives In this lab, students explore how different types of crustal activity are related to specific tectonic plate boundaries. Students will learn to predict where mountains and volcanoes will form based on their knowledge of the plate boundaries.
